### Dollar rises on US indicators

THE DOLLAR staged a April, and a 0.3 per cent rise in losses against the Japanese recovery in late European trading on the foreign exchange.

April, and a 0.3 per cent rise in losses against the Japanese yen after the Bank of Japan intervened to strengthen its ing on the foreign exchange markets yesterday following signs of strong US manufacturing growth last month, writes James Blitz

Potential dollar buyers grew confident after the National Association of Purchasing Management's index rose at its fastest pace in almost four years to stand at 56.3 in May from 51.3 the month before. The survey's employment index also jumped to 49.1 from 43.9 in April, its highest level since April 1989. The dollar closed at DM1.6100 in London, after a previous close of

DM1.6070. However, there was still uncertainty in a number of traders' minds about the scope and pace of the US economic recovery. The April figures for personal income and consump-tion released yesterday were both weaker than expected. These showed a 0.1 per cent rise in personal income in

**MONEY MARKETS** 

SHORT-TERM rates in the storling cash markets ended slightly softer yesterday after the Bank of England took what appeared to be an accommodating position in its money market operations.

Most of the period rates

remained unchanged, with everything from 4-month to

9-month Libor once again ending at 10 per cent, and 1-year Libor at 91 per cent. But

3-month Libor, a key indicator of where interest rates are

moving, ended at 10% per cent, down is per cent on Friday's

Short term clearing bank certificates of deposit were also slightly softer, with 1-month COs ending at 92 per cent from

The softening of rates was

partly due to the small size of

the shortage forecast by the

Bank of England. At £750m,

this was far smaller than those

accommodating stance, 9% per cent.

ket operations.

Short rates softer

According to Mr Neil MacKinnon, chief economist at Yam- currency for the fourth day aichi International in London, yesterday's Indicators may effectively add up to an ill omen. "The real danger is the mismatch in output gains and personal consumption," he says. "If the increase in manu-facturing output is not matched by personal consumption there will be a build-up of stocks that will lead to a cut in production in the third quar-ter." Other economists believe that the market needs more time to decide whether to invest in dollars. "The market will look at money supply fig-ures on Thursday and the non-farm payroll on Friday," said Mr Nick Stamenkovic, an economist at DKB International in London. "Until we get signs of

a stronger recovery the dollar

will remain in narrow ranges."

running Analysts reckon that the BoJ has spent \$500m in intervention operations in the last four days, as it tries to reduce its huge trade surplus in the run up to the summit of the Group of Seven leading industrial nations in July, in late Asian trading, the BoJ pushed the dollar below Y127, its lowest level for four months. By the end of the European trading session, the dollar stood at Y127.40, after a previous close of Y127.70.

The Danish krone was well underpinned as the latest polls showed that Danes will vote "yes" in today's referendum on European economic and mone-tary union. The krone remained at the foot of the European Monetary System's grid, but at minus 34 per cent of allowed swing below its cen-Yesterday's good figures for business confidence in the US tral Ecu rate, after Friday's failed to restrain the dollar's close of minus 37 per cent.

inviting offers of bills in the

However, the market was extremely slow to remove the shortage, with several dealers putting the blame on a

shortage of bills.

As one dealer put it, the market is currently being squeezed between two phenomena. On the one hand, there is the usual slowing down of the economy over the summer, which means that few bills are being offered to the

bills are being offered to the

Bank of England. But there are

carly round.

a previous close of 10½ per cent, and 3-month CDs ending at 9% per cent from 921 per early operations. UK clearing bank base lending rate 18 per cent from May 5, 1992 The Bank then purchased £75m of Band-1 Treasury bills

at 9% per cent, and £10m for resale to the market on 22 June at an interest rate of 911 per cent. In the afternoon, the Bank purchased £20m of Band-1 bank bills at 9% per cent. The

Bank provided late assistance of last week, which amounted to £7.6bn over four days.

Dealers said that the Bank of England had also taken an accommodating stance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Digi Inti 18 994 134 134 134 134 134 134 134 134 134 13                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## lifts Dow Jones to record high

#### **Wall Street**

US STOCK MARKETS turned carly weakness on higher bond yields into a record-breaking performance yesterday as the Dow Jones Industrial Average finished above 3,400 for the first time in its history, writes Patrick Harverson in New York.

At the close the Dow was up 16.33 at 3,413.21, a near 40-point recovery from its low of the early morning. Among other indices, the more broadly based Standard & Poor's 500 rose 1.93 to 417.25, the Amex composite rose 0.15 to 394.84 and the Nasdaq composite ended 3.21 higher at 588.37. Turnover on the NYSE was

The dominant factor of the morning was bond prices, which fell almost a full point at the long end (pushing the yield back up to nearly 8 per cent in the process) as Treasury investors interpreted a strong May purchasing managers' report as reducing the chances of another interest rate cut by the Federal Reserve.

The selling in the equity markets, however, could not be sustained, and amid growing enthusiasm about the outlook for the economy, share prices advanced across all fronts late in the session.

The car sector led the way higher, with all three of the big car markers rising as investors continued to anticipate a recovery in their fortunes. General Motors rose \$1% to \$41% in turnover of 3.3m shares, Ford added \$1% at \$46% in 2m shares, and Chrysler advanced \$1% to \$19% as 1.9m shares changed hands.

Chrysler received an additional boost from Salomon Brothers, the Wall Street broking house, which raised its carnings outlook for the group and predicted profits in both the second quarter and the full year 1992. Salomon set a new price target for Chrysler stock of \$25 over the next 12 months.

After the opening of trading imbalance of orders on the sell

NATIONAL AND

side. Commonwealth Edison fell \$1 1/2 to \$31 1/4 in the wake of a warning from the broking house. Kidder Peabody, that the company's current divided

rate might be cut. Citicorp climbed \$% to \$19% after Morgan Stanley upgraded the stock from a "hold" to a "buy", citing dramatic strides in cost-cutting, peaking problem real-estate assets in North America and an expected boost to earnings from strong fran-

chises in emerging markets. Waste Management rose \$2% to \$38 in heavy trading on the news that the Supreme Court had ruled in favour of the group's subsidiary Chemical Waste Management, which had challenged a special fee levied by Alabama on out-of-state hazardous waste.

TORONTO Stock prices closed higher in moderate trading. According to preliminary data, the TSE 300 rose 16.05, or 0.47 per cent, to close at 3,403.98. Advancing issues edged declines 276 to 259.

Volume of 22.8m shares was up from Friday's 20.3m. and trading value rose to C\$303.3m from C\$223.8m.

Eight of 14 stock groups closed higher, led by the transportation group, up 2.2 per

Laidlaw B, the most-heavily weighted stock in the group, rose % to 12%. Financial services gained 1.5 per cent and gold was up 1.0 per cent. Industrial products also closed

Magna International A tumbled 1% to 32%. The company said it plans to issue 3.2m class A shares at C\$32.25 a share.

#### **SOUTH AFRICA**

JOHANNESBURG slipped back as a number of stocks went ex dividend and sentiment was discouraged by the ANC threatening mass action. The industrial index lost 35 to 4,630 while the overall index was down 28 at 3,704. The gold index shed 17 to 1,073.

## Growing optimism Baring expects 'quantum drop' in Swiss inflation

LAST Thursday's Ascension Day holiday seemed, yesterday, to have taken the initiative away from most continental bourses, writes Our Markets

Baring Securities observed that last week's subdued performance from European coulty markets followed on from weakness in bond markets, the latter reflecting weakness in US bonds and interest rate prospects, and disappoint-ment with French fiscal policy. This week, its strategy team expects "another quantum drop" in the headline rate of Swiss inflation, perhaps giving

which has been somnolent, if still elevated, in recent days. STOCKHOLM rode a wavelet of foreign interest, with talk of institutional program trading as the Affarsvärlden General index closed 7.0 higher at 998.5 in turnover up from from SKr349m to SKr642m. However, dealers noted that the sharp jump in volume reflected the fact that many of big investors, including all of the major insurance companies, stayed closed last Friday.

some impetus to a bourse

Among prominent winners

Base value 1000 (36/10/96). the base metal miner, Trelieborg, recovered some of last week's losses on disappointing current year prospects to end with the B shares SKr7 higher at SKr130. The June synthetic future on the OMX Swedish share index closed at 746.3,

Day's Low 1194.96

equities may be poised to shoot through a resistance level Other Nordic makers were not so fortunate. COPEN-HAGEN's 25-share KFX index fell 0.58 to 100.04 ahead of today's Maastrict treaty referendum, reflecting profit-taking in heavyweight stocks like Novo Nordisk, FLS Industries and Carlsberg. OSLO lagged in spite of

compared with a spot level of

740.18. Some analysts said that

slightly firmer prices for Norway's North Sea oil. The allshare index fell L56 to 449.53 in turnover of NKr173m. Mean-while, HELSINKI shed 1 per cent, the Hex index closing 8.5 lower at 892.2 in slow trade. KOP restricted shares fell FM1 to FM11.50 following Priday's first quarter loss of FM527m. up from a deficit of FM95m for the same period of last year.

MILAN's screen trading system was knocked out of commission by heavy rainstorms and lightning overnight; this produced drastic cuts in volume in its 35 stocks which account for about one quarter of bourse turnover, and the rise of 1.38 to 497.98 in the Comit index came in very thin trading. Turnover was estimated at L60bn or less, against figures in the £100bn area last week and over L150bn on Fri-

day, May 22. Sifa, the state-held controlled

closed L153 or 13 per cent higher at L1,350 after being delayed from trading once during the session for excessive gains. Consob. the market's regulatory agency, had suspended Sifa from trading on

Friday pending details of a plan, approved over the weekend, to merge it with the state engineering group, Finmeccan-FRANKFURT was subdued,

the DAX index ending 5.08 lower at 1.798,14 after a decline of 2.83 to 718.34 in the FAZ at midsession. Turnover stayed low by recent standards at DM5.1bn, up from DM4.6bn last

Bulls had the upper hand in a pre-bourse which saw the DAX well above Friday's level in a continuation of that day's gains, but they lost the initiative after both follow-through orders and foreign buyers failed to materialise.

PARIS saw out a dull day in which technical factors were more influential than corporate news. A number of leading shares went ex dividend, which helped to depress the index, and slim turnover of some

were few buyers around. The CAC-40 index closed down 15.89 at 2,017.40.

Euro Disney again featured among the day's losers, falling FFr4 to FFr117 following negative press comment over the weekend. Eurotunnel advanced 30 centimes to FFr36.55 after bankers agreed at the end of last week to make new funds

Elsewhere, Paribas lost FFr3.40 to FFr408, LVMH roseFFr5 to FFr4.025 and Elf shed FFr3.60 at FFr398.40.

AMSTERDAM was led lower by the weaker dollar which affected stocks with exposure to the US. The CBS Tendency index closed down 0.6 at 130.4 in turnover of Fl 504.6m. Royal Dutch lost 60 cents to

Fi 157.00, Unilever was Fi 2.20

down at Fl 183.10 and Akzo slipped 90 cents to Fl 159.30. BRUSSELS improved on the first day of trade after a four day holiday. The Bel-20 index finished up 1.76 to 1,232.56 in

high turnover of BFr1.4bn. Tractebel put on BFr300 or 3.6 per cent to BFr8,690 following local press interviews with the chairman over the week-

manufacturer, gained BFr90 to BFr3,980 following a positive

gm last week. MADRID was weaker, with news that the current account deficit had narrowed slightly between April and March having little effect on sentiment. The general index closed down

0.41 at 260.65 with turnover

estimated at Pta14bn. Banesto weakened Pta5 to Pta2,895 after it said at its annual meeting at the weekend that it was setting up a Pta6bn loan loss reserve to stabilise profits and that it is to reduce industrial investments. BRV lost Pta25 following its purchase of a 20 per cent stake in General Electric Capital of Puerto Rico for Pta2bn. Aceri-

nox rose Pta610 to Pta7,600. VIENNA was stronger with sentiment boosted by the successful offer of 5.4m shares in Vienna International Airport. The issue, which was due to last all week, was closed yesterday with trading planned to begin next month. The offer, reducing the state's share to 73 per cent, will raise Schl.8bn to finance expansion work. The ATX index gained 3.06 to 990.2.

## Nikkei average loses 1.9 per cent on arbitrage selling

#### Tokyo

SHARE prices lost ground in light trading and the Nikkei average, which rose initially on the stronger yen, finally declined by 1.9 per cent on arbitrage-related selling, writes Emiko Terazono in Tokyo.

The 225-issue average closed down 343.64 at 18,004.11, after a high of 18,502.61 and a low of 18,003.31. The yen's strength and higher bond prices encouraged a rise in the stock futures market, but the Nikkei plunged on arbitrage unwinding in the afternoon.

Volume fell to 180m shares from 240m. Traders said insti-tutions, which believe that the Nikkei will fall to the 17,000 level again, are unwilling to chase share prices up at the

the Topix index of all first section stocks fell 15.78 to 1,360.54; in London, the ISE/Nikkei 50 Index rose 2.04 to 1,077.37.

The Bank of Japan continued its dollar selling intervention in the foreign exchange mar-ket, and the US currency closed down Y1.55 against the yen, falling below Y127 for the first time since February.

The strength in the yen boosted hopes of lower interest rates, encouraging buying in the stock futures market. However, market participants, unwilling to hold long positions ahead of next week's June futures expiry unwound positions. Mr Chris Newton at James Capel added that the cash market failed to react to the ven's strength, as currency moves were already discounted into share prices last week.

ulative issues rose on short-term dealer trading. Nippon Mining, the most active issue of the day, rose Y9 to Y478 and Meiji Milk Products advanced Y1 to Y913.

Housing companies gained on the rise in April housing starts, the first year-on-year rise in 18 months. Taisei Prefab gained Y30 to Y2,400 and National House Industrial rose Y30 to Y1,690.

Steel companies were hit by poor earnings results and weak forecasts for the current year. The top five steel makers posted double digit declines in pre-tax profits for the past fiscal year, and expect current year pre-tax profits to decline sharply due to weak demand and higher production costs. Nippon Steel fell Y4 to Y299 and NKK dropped YI to Y284. Car companies were also sold

on earnings concerns. Nissan

per cent fall in pre-tax profits for the year ended March, lost Y15 to Y617, and Toyota Motor fell Y10 to Y1.500.

In Osaka, the OSE average lost 45.50 to 20,832.38 in volume

#### Roundup

THE fall on Toyko had a negative impact on most of the region yesterday. New Zealand was closed for a public holiday. HONG KONG saw early gains eroded by selling of blue chips in the afternoon and the Hang Seng index closed 24.15 lower at 6,056.00. Turnover was HK\$5.1bn.

Cheung Kong was the most active stock, gaining 50 cents at HK\$27.20 while Hutchison Whampoa put on 10 cents to

while ANZ lost 8 cents to of bank and securities shares. A\$4.17 as investors reacted to The composite index shed 5.01 its exposure to India's securito 569.19 in turnover of Won240.5bn. Shares in Hyundai companies fell to their

By William Cochrane T olidays in the UK and

Europe took some of the initiative out of equity markets last week, but gentle rises in the US and Japan combined to leave the FT-Actuaries World Index up by 0.4 per cent.

The best gains came from

Denmark in Europe, and Sing-apore and Hong Kong in the

Pacific Basin, all with domestic stimuli but all, too, seeing the effect of foreign buying. Denmark, says Mr Ole Witte of Bikuben, the stockbrokers, moved as polls ahead of today's Danish referendum on the Maastricht treaty on European union switched from a 41:39 ratio of "No" votes at the beginning of the week, through a similar balance in

favour in mid-week to a 43:37 "Yes" indication last Saturday. Going into Europe has always been perceived as a very good thing from an economic point of view, says Mr Witte. He adds that it was mainly blue chips, like Sophus Berendsen, Dansico and Novo

which led last week's gains. Singapore led the week on suggestions of a 0.25 per cent cut in prime rate, says Mr Mike Franklin of Kim Eng Securities. This did not happen but there was a perception ing and that, in any case, the market had lagged too far

behind Hong Kong. The rise was not too discriminating. Singapore Airlines climbed on results at the low end of expectations and Keppel, apparently, went ex-rights without seeing the share price adjustment that this would normally bring. "Allegedly," says Mr Franklin, "there were some big program deals going on in the market, set up by big US institutions which could see the US economic recovery coming through to Far East

economies." There were indications, too. of US involvement in Heng Kong, where domestic confidence was lifted by two major deals - Hongkong Land's sale of 9, Ice House Street and Hutchison's privatisation of Cavendish - going through at good prices.

FINANCIAL TIMES CONFERENCES

## **NORTH SEA** OIL & GAS

- New Investment Challenges

6 & 7 July 1992, London

This topical conference will review North Sea activity, examine the current investment challenges facing companies operating in the North Sea and assess the outlook for the equipment and service supply industry. Speakers taking part include:

**Dr Chris S Gibson-Smith** 

Chief Executive, Europe BP Exploration Operating Company Limited

Mr Sam Laidlaw Managing Director Amerada Hess Limited

Mr Knut Aam President & Managing Director Phillips Petroleum Company Norway Mr Peter D Gaffney

Gaffney, Cline & Associates Ltd Ms Judith Z Steinberg

Mr Edmund A Wallis Chief Executive

PowerGen plc A FINANCIAL TIMES CONFERENCE

The Rt Hon Michael Heseltine MP President of the Board of Trade Department of Trade and Industry

Mr Johan N Void **Executive Vice President** Statoil Group

Mr Chris Greentree Chief Executive LASMO plc

Mr Ron Probert Managing Director, Gas Supply & Strategy

Mr Peter H Steen Deputy Managing Director The Danish Energy Agency

Few events have captured the world's imagination like the Earth Summit in Rio de Janeiro. But few

have also given rise to as many misunderstandings and false hopes, writes David Lascelles, Resources Editor

## Vast agenda but thin on action

TILL this summit be issues. Even if the dozens of world leaders. Who nlow the planet Banks who nlow the planet Banks who nlow the planet because of the dozens of the dozens of the dozens of the dozens of the planet because of the planet becau finally becomes environment-minded? Or will it be just another staged political event, rich in form but bare in sub-

Will it launch a full scale assault on the world's mounting environmental problems, or will it pass without trace?

Judging by the tortuous twoyear preparations for the event, the answer will certainly not be the first of these. The run-up has been marked by far more discord than harmony among the dozens of powerful constituencies which are taking part. As a result, the agenda for the two weeks of talks is huge, jumbled and decidedly thin on specific plans of action.

So those people who had hoped or expected Rio to mark something of a watershed in human history may have to brace themselves for disappointment.

On the other hand, the cyna sham may also come away growth were unsustainable. unsatisfied. There is no question that the event has focused the minds of 140 governments on complex environmental questions, stirring up in the process a lively debate which has sharpened many of the

without a detailed action-plan, it would be most surprising if they do not take with them a sense that the environment has acquired fresh political momentum. And that may be the yardstick by which Rio's

success should be measured.

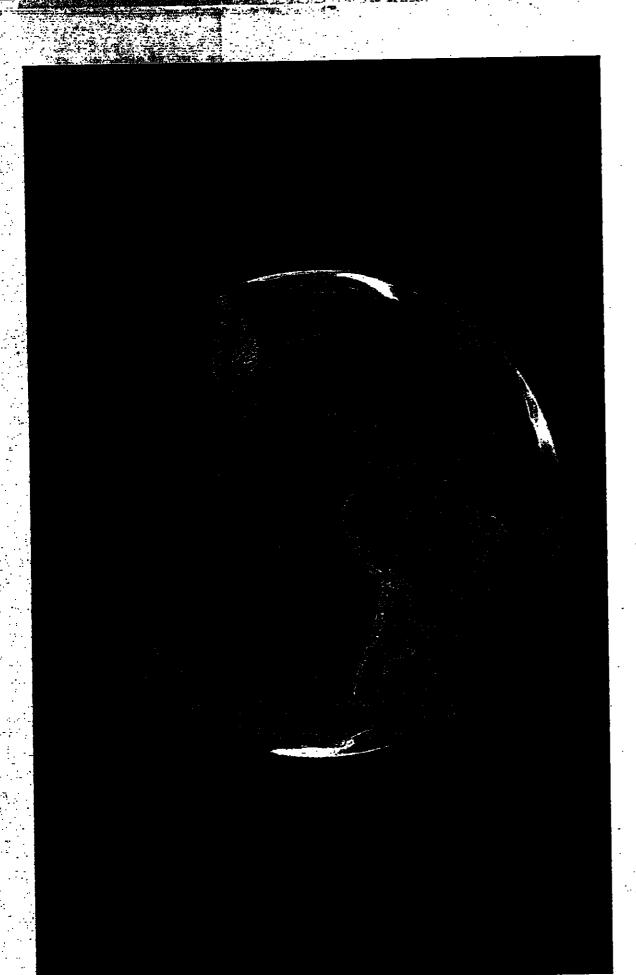

Mr Maurice Strong, the Canadian businessman-turned-UN official who is the chief organiser of the event, stresses that Rio is not the culmination of a movement to save the environment, but it must mark "a credible beginning."

Why have a summit at all? Rio's history goes back 20 years, to 1972 when the UN first put the environment on the international agenda at the Stockholm conference.

Ten years later, the UN created the World Commission on Environment and Development, chaired by Mrs Gro Harlem Brundtland of Norway. whose 1983 report Our Common Future warned that the ics who have denounced Rio as current patterns of economic

Another ten years on, none of these problems has gone away. The world has become a dirtier, noisier place, parts of the Third World have become poorer, the pressures on dwind-

☐ Continued on page two

Can you provide the energy the world needs today and preserve the earth for the generations to come?

Mankind needs energy to fuel the processes that create light, heat, shelter, transportation and goods - the basis of our modern civilization. Yet as the world's population grows, so does the demand for improved quality of life. Energy consumption increases daily,

and with it the threat to clean air, pure water and fertile soil. These natural resources are not inexhaustible.

It is not too late. Man's creative ingenuity can solve the problems he has caused. ABB provides some of the answers. As a global leader in electrical engineering we have the technical expertise to generate, transmit and distribute energy with great efficiency. Our leading environmental control technology reduces environmental strain. Our industrial systems improve productivity, reducing the amount of raw materials and energy required. And our advanced train and mass transit systems help to conserve energy, too.

ABB is committed to the principle of sustainable development. The balance between mankind's needs and the conservation of the natural resources of our planet depends on clean and efficient technology in the fields of electrical engineering, industry and transportation. That's where we come in.

Yes, you can.

The fact is that recession has not helped. There is even an anti-green backlash in the US where 20 years of mounting environmental regulation is beginning to be costed in terms of lost jobs and hassle for the

The result is that there will not, as originally planned, be any binding timetable in Rio to reduce greenhouse gas emissions. Instead, there will only be a promise to produce a plan of action by some future date. The critics have already seized on this as a sign that the world's worst pollution culprits are not taking Rio seriously. But, maybe, as the minimalist school argues, this is better than the alternative which is nothing at all.

Nor can the Third World

agree on what it wants from minister of primary industries. Rio. Are the issues for its memand one of the more compative bers the protection of the natuspokesmen for the developing ral resources which it posworld. "We have to find an esses in ~ dwindling equation for that."

The Third World's interest in abundance? Or do they centre on the degdevelopment has provoked the radation of the environment other big clash in Rio, between and the under-development to the rich and poor countries which it can usually be traced: over the place that aid should the spread of deserts. the water occupy on the agenda.

And it is pointand noor countries who say less, if not immoral, of the they will do it provided they industrial countries to demand are given the financial and technical means. Mr Michael ests while ignoring the plight Heseltine, the UK's former of people who have to cut environment secretary, spoke of "a bargain" to be struck when he launched the final to protect the environment and have development," says Dr

preparatory meeting for UNCED in New York in March. Japan also seems to be gear-

ing itself up to take the initia tive - something it is usually reluctant to do on global

Mr Noboru Takeshita, the former prime minister, who has now embraced the environmental cause, says: "Japan can play a bridging role between rich and poor countries because it has itself escaped from poverty and pollution. The main question is how

much money the rich countries will be prepared to give. Despite UNCED's estimates of a requirement for \$125bn a year, the actual sum is likely to be less than one tenth of that figure. Again, the critics will give voice, but the minimalists will say it's better than nothing.

The other central question is what happens after the Summit. If Rio is to be the start rather than the finish of the process, the strength of the continuing machinery will be crucial. The participants will sign a Rio Declaration, a kind of environmental 27 Command ments backed up by a bulky Agenda 21 action programme. The Declaration is not hinding. so the strength of public opinion will decide how enduring

Rio's legacy can be. Large numbers of people will be disappointed by Rio because it will not address their particular interest. The greatest danger is that it will leave a vacuum into which will rush who knows what.

However, it would be surprising if Rio did not set something in motion and earn a place in the history books, even if its value only becomes apparent in the next century.

THE SUMMIT AGENDA

## Rio is not just one event but several

APART from the official negotiations involving more than 160 countries, there will be dozens of gatherings in and around Rio of non-governmental groups the green organisations, business groups, and so on -- all striving to influence

But the main focus Will be on the newly-built Rio located 20 miles outside Rio. Here, official delegations meet for 12 days to hammer out a series of treaties and agreements, culminating in a grand ceremony involving as many as 60 world leaders, the

the outcome.

The agenda on the Rio negotiating table is a lot less ambitious than first hoped, mainly because of the deep disagreements exposed during the preparations.

largest such gathering in

For example, a proposed dropped because it tried to do too much, Instead, there will be a watered down Rio Declaration - a kind of Ten Commandments on the Environment," except that it will have 27. This will commit signatories to oursuing sustainable development, and eradicating poverty.

It will also enshrine the principles of "polluter pays," free trade, and environmental protection. and uphold the rights of women, children and indigenous peoples. Another key principle is that countries have sovereign rights to exploit their resources, but an equal responsibility to ensure that

their actions do not harm the environment for others The Rio Declaration will be backed up by Agenda 21, an 800-page action programme which will flesh out the 27 principles. This enormous document will

issues: land, air, water, living things, as well as related matters like education, poverty and managing toxic waste. Participants will also sign two international conventions, or treaties.

The first of these, widely described as the keystone to Rio, will be a World Climate Convention to promote measures to reduce the greenhouse gases that threaten to change the world's climate This does not contain the binding deadlines originally planned, though the developed countries will agree to come up with specific plans aimed at reducing greenhouse gas emissions to their 1990

levels by the year 2000. The second, a **Bio-Diversity Convention**, will aim to protect the richness of the world's plant and animal life, though again critics have claimed that it is not strong enough, and that the wealthier countries should commit

more resources. There was to be a third treaty to save the tropical forests, but this proved too controversial because it implied blame on the part of the Third World countries in managing their resources. Instead, there will be a Statement of Principles on Forests which will recognise countries' rights to exploit their forest resources, but also stress the need for proper forest

management Both the conventions will contain pledges of money by the rich countries to help the poor deal with their environmental problems. But quite how much money is committed will be the subject of much hard bargaining at the Rio 'conference centre.

down trees just to live.

We have production facilities in Sweden, Holland, France, Brazil and Argentina. Scania vehicles are assembled in another ten countries.

Around the world, Scania has a vast network of importers, dealers and service workshops.

## JUBAIL & YANBU

#### **Models of Environmental Protection** and Industrial Productivity

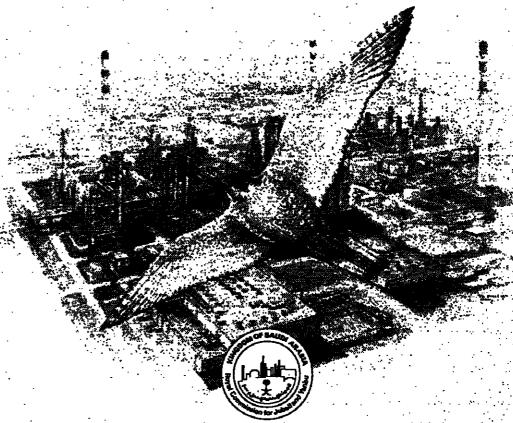

Industrialization and a healthy environment are not mutually exclusive.

Saudi Arabia's two new industrial cities - Jubail on the Gulf and Yanbu on the Red Sea - were designed, from the ground up, to conform to the highest international environmental criteria. Continuous testing, monitoring, and inspection programmes ensure industry's compliance with prevailing standards.

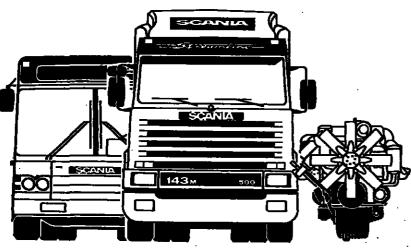

Through use of the latest technology — as well as long-standing methods — industrial development, environmental protection, and the creation of safe, healthy residential areas are a reality at Jubail and Yanbu.

## Heavy vehicles for tomorrow's demands.

a lead in quality, performance and environmental awareness to provide our customers with optimum haulage economy.

A fundamental element of Scania's business strategy is to produce its main components in-house.

Scania is present on 85 markets all over the world and ranks as the world's 3rd largest 1400 service workshops ensure that the 350000 Scania vehicles in the world are kept rolling day and night.

Approximately SEK 600 million a year is spent on product development. A large portion of this investment is devoted to improving energy utilization of the vehicles, to environmental developments and to noise research.

Scania welcomes stringent international environmental standards. It is important for all countries to coordinate those standards, since specific national standards result in variations which make product development needlessly ineffective and constitute trade obstacles.

# A puzzle of fiendish complexity

world's atmosphere are global warming destruction of the ozone layer and acid rain. Each would be a fiendishly complex scientific puzzle in its own right. In fact they interact making it almost impossible even for the brightest research groups armed with the most powerful supercomputers to disentangle the effect of indi-vidual pollutants.

The state of the s

For example, much of the industrialised world is cloaked in a man-made haze of sulphate aerosols - microscopically small droplets and particles that contribute to acid rain. But, according to the lat-est scientific evidence, this is moderating global warming because the particles reflect some incoming solar radiation back out to space.

Scientists are not even sure about the effect of chlorofinorocarbons on climate change. CFCs are undisputed envi-ronmental villains because they destroy the ozone layer in the upper atmosphere, which protects life on earth from the sun's harmful ultraviolet radiation. They also contribute significantly to global warming by absorbing solar heat (infrared radiation). So the international agreement to phase out CFC production will not only save the ozone layer but also

help to fight the greenhouse effect. Right? Not necessarily. Recent studies show that the warming effect of CFCs over the past decade has been counterbalanced by their ozone destruction, because a thinner ozone layer traps less heat. The scientists concerned emphasise that their findings are tentative, and even if CFCs turn out to have no net impact on global warming, it is still vital to phase them out as soon as possible because life depends on the earth's ozone shield. The example does, however, illustrate the scientific uncer-

tainties about global warming. There is no doubt that the greenhouse effect is real, in the sense that carbon dioxide and other gases in the atmosphere absorb solar heat which would

otherwise be radiated back into space. Human activities have increased the amount of CO2 in the atmosphere by about a quarter since 1850, mainly through burning fossil fuels and to a lesser extent through deforestation.

According to the best estimates, CO<sub>2</sub> represents about 55 per cent of total man-made additions to the greenhouse effect. Other significant contributors include CFCs, methane, nitrous oxide and ozone. (Low-level ozone, formed in a

Predictions are fraught with uncertainty, says CLIVE COOKSON **Science Editor** 

photochemical smog as a result of vehicle emissions, is an environmental menace ozone's proper place is in the upper atmosphere.)

Scientists can show that reenhouse gases are accumulating in the atmosphere. What they cannot prove yet is that global warming is already hap-pening as a result. Although the past decade has been the warmest worldwide since meteorologists began keeping reliable weather records in the 1850s - and the average global temperature has risen by 0.5 deg C over the last century due to a natural fluctuation in the climate, rather than the greenhouse effect. We may

change stand out unequivocally from random climatic

variations.

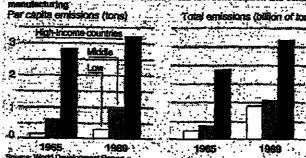

However, several different supercomputer models of the global climate predict a warming of several degrees over the next century, if industrial activities continue to change the composition of the atmosphere at the present rate. The average temperature is likely to rise by somewhere between 1.5 deg C and 4.5 deg C if the atmospheric concentration of CO<sub>2</sub> doubles. That would raise sea levels by something between 30cm and 1m.

The best estimate of the UNsponsored Intergovernmental Panel on Climate Change is that the average global temperature will rise by 1 deg C by the year 2025 and 3 deg C by 2100, if nothing is done to restrain CO<sub>2</sub> emissions. Sea levels would rise by 6cm per decade - enough to inundate low-lying countries such as Bangladesh fairly early in the 21st century.

These predictions are fraught with uncertainty, particularly since the supercom-puter models, such as the one at the UK Meteorological Office are only now being adjusted to take realistic account of the key role played by clouds and oceans in climate change.

Increasing cloud cover at low levels would reflect more solar radiation back into space and counteract global warming. "The uncertainties are large and all-pervading," comments Professor Keith Browning, a specialist on clouds at the Met

Industrial countries are responsible manufacturing Per capita emissions (tons) Total emissions (billion of tons)

Office. "They severely limit the reliability of climate predic-

And the latest evidence suggests that the oceans may absorb heat from the atmosphere more effectively than climatologists had realised previously. If so, they could delay the full impact of global

warming by several decades. In Japan, Dr Hajime Akimoto, a director of the National Institute for Environmental Studies, says: "The theory of global warming is quite

dict is the speed at which it

If the climate change is uncertain on a global scale, the regional variations it will cause in temperature and rainfall are even more speculative. Some meteorologists believe the British Isles could be one of the few parts of the world to escape without any warming, because the exceptional pattern of ocean currents in the North Atlantic would absorb the extra heat. Conversely,

Forests are the earth's "lungs," absorbing carbon dioxide. Pictured above the desolate result of a fire used to clear forest land in the Am

continental interiors such as ing; to wait for proof of global the great grain-growing regions of North America might suffer exceptional warming - with potentially dire consequences for world food supplies.

All the uncertainties about climate change and other consequences of atmospheric pollution do not mean that the world should postpone mea-sures to tackle them, scientists say. Most climatologists support vigorous international action to curb fossil fuel burn-

warming would be too late. Meanwhile, a few imaginative scientists are dreaming up grand "environmental engineering" projects to repair some of the damage done to

The best-known proposal is to seed the southern oceans with iron, a nutrient that would stimulate marine organisms to grow more vigorously and absorb more CO, from the atmosphere. And a group at

investigating a concept to "close the ozone hole" by injecting thousands of tons of alkanes (simple hydrocarbon gases such as ethane or propane) into the stratosphere over Antarctica for about a month every year.

"There are many uncertainties underlying this idea," the California scientists admit, but they say the time has come to start thinking seriously about large-scale technical fixes for

# PROGRESS. WITHOUT COSTING THE EARTH

FIAT'S PRESENCE AT THE EARTH SUMMIT '92

Certain appointments can never be missed. The Earth Summit at Rio de Janeiro is one of them. Because, at stake, is the future of our planet. The Fiat Group is present and believes it can help.

How?

By reconfirming its commitment to the realisation of environmentally friendly manufacturing processes and products.

By showing faith in the exchanges of experience with other like-minded protagonists from all over the world.

By contributing to the definition of a new set of rules which must govern the future behaviour of man in his environment.

The Fiat Group has already taken action to help the environment. Its corporate policy aims to anticipate legislation rather than wait for it and follows three fundamental principles:

"Avoid pollution, avoid waste and optimize the use of resources".

It is a commitment to the world we live in. For progress in harmony with the future.

#### LAND AND RAIN FOREST PROTECTION

have to wait another 10 years

before the effects of man-made

## Dismay over the lack of agreement

conference will be to halt the over-exploita-tion of the Earth's land surface which has accelerated to meet the needs of industry and growing populations, writes

Forests have been felled, mineral extraction has scarred the earth and soil has been poisoned by domestic and toxic waste. Soil erosion and and the spread of desert conditions -"desertification" - have been caused by intensive agriculture and primitive farming and

overgrazing.

With the growth of environmental awareness in recent years, tougher national legislation and international agreements have started to get to grips with these problems.

It was hoped that the Rio summit would re-inforce this

by drawing up an international set of principles in the Earth Charter and a programme for action for the next century, in Agenda 21. But progress has been slow

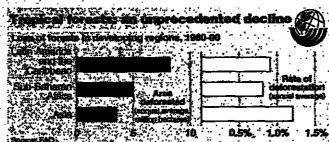

in the preparatory meetings for the summit and environmental pressure groups have expressed their dismay at the lack of agreement so far. They are particularly disap-

pointed at the lack of tough proposals for protecting the rain forest. This is a central issue in the climate change debate as forests act as "sinks" to absorb carbon dioxide, the main greenhouse gas contributing to global warming. They also protect the genetic diversity of plant and animal life and provide a home for

indigenous peoples.
It is estimated that half the Earth's original tropical forest has been destroyed over the centuries and that 11.4m hectares are still felled each year.

Intensive logging has been the the main cause of deforestation but has been overtaken by the destruction caused by the "slash and burn" cultivation carried out by landless people. Originally it was intended that Rio should produce a binding international agreement on forest protection but this has been abandoned in the face of disagreements. It is now hoped to draw up a

set of principles on forestry but here again there are disagree ments. So far, at least six different versions of the principles have been mulled over and there are still many areas

States, the European Community and other industrialised countries still want Rio to be the start of a process for eventually developing a legally binding convention on forests. But the G77 group of developing countries are cool towards this and see it as a move to strengthen the influence of northern countries over the

There are, however, some concrete proposals in Agenda 21. It urges -co-operation between countries to provide expertise, funds, research and technology for improved man-agement and sustainable development of the rainforest. Annual funding for this would be in the region of \$2.5bn between 1993 and 2000. But industrialised countries would

It is estimated that half the Earth's tropical forests have been destroyed

be reluctant to meet such a

Tony Juniper, rainforest campaigner for Friends of the Earth, finds this depressing. He sees it as no advance on existing international schemes which have failed to protect

destruction of the rainforest. impact on soil is another area of concern. The Organisation for Economic Co-operation and Development (OECD) says its members (US, Canada, New Zealand, Australia, Japan and Western European countries) produce 9bn bonnes of waste a year. This includes 2.5bn tonnes of industrial waste of which 300m tonnes are hazardous. Much of this is disposed of in landfill sites where it can lead to build up of methane gas and pollution of the water supply. Urgent action is required to control the rapidly growing volume of industrial waste,

of controversy. The United

household garbage and sewage according to the draft for Agenda 21. It estimates that the amount of municipal waste worldwide will double by the end of the century and double again

before the year 2025. Agenda 21 suggests that industrialised countries should have programmes in place to stabilise or reduce waste and increase recycling by the year 2000. Developing countries should work towards that goal so long as it does not jeopardise their development pros-

pects, it says. An important topic will be desertification and the famine and disease which it brings. the Earth's land surface are being degraded by this process, which is caused by lack of rain, overcultivation, deforestation and mismanagement of

Most publicity has concen trated on the Sahel region of West Africa where drought killed over 50,000 people and millions of heads of cattle in the 1970s. But there are also threatened areas in other parts of Africa, the Middle East, India, Pakistan, China, Australla, the Russian Federation, theUS and Latin America.

Agenda 21 proposes that by the year 2010 environmentally sustainable techniques should The problem of waste and its be used in agriculture and grazing in dry areas. There should be better management of water resources, protection of vegetation and extensive planning of new forests. It wants a system of contingency crop planning linked to weather forecasts and strategies for importing, storing and transporting food in emergen-

> The question of sustainable agricultural methods throughout the world and the means of phasing out intensive and harmful farming and over-grazing will be considered.

#### FRESH WATER SUPPLIES

## A billion people in need

NE BILLION people in the world do not have access to safe drinking water, 1.7bn lack basic sanitation. There may be enough fresh water in the world to meet demand but it tends to be in the wrong place, at the wrong time or of the wrong

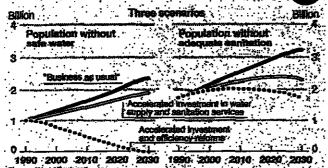

Fresh water is a limited resource. Less than 1 per cent of the world's supply is actually available for human use, the rest being locked away in glaciers and polar ice caps. considered the best way to protect both the environment and people's livelihoods.

Water management is a multi-objective long-term approach to utilising the natural resource. It means considering the social and ecological impacts of water projects; involving local communities at one level, international cooperation at another. It means addressing such issues as present and future consumption patterns, waste and pollution, land use and global warming.

Most of the world's fresh water - in rivers, lakes and swamps - is used in agricultural irrigation, but up to 80 per cent of it never reaches crops. Industry uses much less than agriculture, but returns it to its source often polluted and unfit for consumption.

"Safe water and sanitation are the foundations for health, and health is the foundation for global development" - Dr Hiroshi Nakajima, director general, World Health Organisation

Good policies can make a big difference in quality of life.

While domestic use accounts for only 6 per cent of total fresh water consumption, lack of adequate sanitary facilities contribute to serious environmental pollution. Most human waste is simply dumped in the nearest body of flowing water, causing water-borne diseases that kill 25,000 people a day in

developing countries. Coastal areas are most atrisk from the 20bn tonnes of waste which ends up every year in the sea. Two-thirds of the world's population live

within 80 kilometres of the coastline, contributing to and

suffering from its environmental degradation. Marine habitats are destroyed, fishery industries threatened, recre-

ation, tourism and general eco-

nomic development jeopard-

Man's past and present activities also endanger water resources in less direct fashion. Deforestation and bad land use practices disturb the hydrologi-cal cycle, making the soil less able to absorb precipitation and release it over time.

The result is flash flooding and overflooding in delta areas of major rivers like the Ganges

and Mekong, with devastating effects on local populations. Seasonal droughts follow.

Coastal areas suffer increasingly serious damage from tropical cyclones, as coral reefs and mangrove swamps are lost to industry. Global warming further increases the risks of coastal cyclone flooding, while endangering entire island territories. Rising sea levels in the future could mean unique island flora and fauna disappear for ever, and with them indigenous people's traditional

Perhaps the greatest damage done by man to fresh water resources is the building of billion dollar dam projects, like those in Egypt and India. More than 200 large dams are being built annually, and it is estimated that by the end of the decade 60 per cent of all the world's rivers will be dammed. Such projects cannot be justified on economic grounds and

On average. water-borne diseases kill 25,000 people a day in developing countries

certainly not on environmental grounds, says Phil Williams, honorary president of the International Rivers Network in California. "We regard the

While many areas of the earth are suffering from drought, heavy rains in Brazil this year caused widespread flooding which led to the deaths of 23 people. Children, above, are pictured jumping

most acute threat to the river system to be the construction of the these huge water pro-

He cites the "disastrous" effects of the building of Egypt's Aswan Dam on the Nile River. Its reservoir is becoming clogged with silt. reducing its useful life span; the river channel is changing fertility in the sub-plain solls has declined, while salinisation has increased; there is salt water intrusion in the estuary, a major area of food production; the shore line is eroding; fisheries have been destroyed.

IRN would instead like to see local energy and irrigation needs met properly through small scale electricity generation and capital lending projects for individual farmers. Energy efficiency programmes and updated technologies would alone reduce demand

many-fold, it says. Such multi-objective programmes will have to be applied to water management around the world, say environmental and aid agencies. They have to begin at local levels, addressing community needs and priorities, using suitable technologies that are low cost. readily maintained and WaterAid, the UK water

Some billion-dollar dam projects cause great harm to water resources

and to local economies

charity, works in just this fash-

ion in nine countries in Africa and Asia. David Collett. director, says: "Our message to world leaders is . . do not allow the environment and develop

ment to become divorced from one another. And do not fall into the trap that the world's problems can only be solved by international action. We must think globally to preserve and improve this planet's environment. But action must come at the local level as well."

Similar approaches - incorporating cooperation between developed and developing countries - are recommended for achieving the sustainable development of agriculture and marine resources. Where seasonal flooding, cyclones or drought seem inevitable, organisations like Oxfam favour programmes aimed at helping people cope with such disturbances long-term.

The aim of development agencies is that by the year 2000 each person has daily access to at least 40 litres of safe water, and that waste is collected, recycled and/or dis posed of in an environmentally sound fashion. In developed countries, not immune from drought, water tariffs could be introduced to reflect the marginal costs of raising water infrastructure standards.

The high seas are seen as a potential model for sustainable resources management. Marine pollution caused by shipping, waste disposal and incineration at sea is a grave problem, but the vastness of the oceans has protected them so far from being seriously polluted.

Environmentalists are looking for a global strategy for managing the high seas with legally binding agreements - before it is too late.

Loss of species is wiping out a medicine chest of potential cures to serious diseases

## Concern for earth's living wealth

VERY DAY "we are los-ing species we don't even know exist and in one of which could lie the cure for diseases, such as AIDS." says Ms Maria de Lourdes, director of the international department of the Brazilian environment ministry.

The realisation that destruction of forests was wiping out whole slices of potentially valuable species has made biodiversity an important issue in recent years and a crucial part of earth summit discussions.

Biodiversity refers to all the species of animals, plants and microorganisms in the world as well as their genetic variety

Continued from previous page:

and the ecosystems - water, land or air — in which they live. Known as "the earth's living wealth," it provides an essential supply of food needs and many of our medicines.

Our knowledge of biodiversity is still very incomplete. Around 1.4m species have been listed of which 751,000 are insects, 41,000 vertebrates and 250,000 plants. Biologists esti-mate that there at least between five to ten million species in existence and maybe as many as 100m. Despite today's concern, biodiversity is continuing to diminish and recent studies suggest that the world

will lose between two and

Farmers face mounting pressures

over the next 25 years. If ten million species exist, this means losing a staggering 20-75 per day.

The Amazon rainforest is the planet's greatest stock of biodiversity. Although the casual visitor may be disappointed not to see flocks of colourful parrots, monkeys swinging from tree to tree, and wild animals jumping out from the s, it is home to 20 per cent of all higher plant species and birds and ten per cent of the world's mammals. In one tree alone between 100 and 300 species of butterfly can be found and one hectare of the

seven per cent of its species jungle contains between 100 and 300 species of bird. Popularly thought of as a homogenous forest, in fact it has 12 distinct ecosystems.

The Amazon River holds 20 per cent of the planet's fresh water and 2,000 species of fish (compared to an average 20 species in European rivers). Many Amazonian species are

being lost or are under threat from human activities such as logging, flooding for hydroelectric projects, forest-cutting and burning for cattle pasture, and gold mining, which is choking rivers with sediment and polluting aquasystems with the mercury used for gold extrac-

France, but for more recycling

als that have to be extracted.

tion. Although ranching is the most destructive activity, Mr Chris Uhl, a biologist from Pennsylvania University says 40 of the 350 timber species currently being harvested by loggers are under threat of

Green extremists are in favour of complete conservation, arguing that we should not destroy anything because we do not know what is there, and are constantly finding new ways in which biodiversity can contribute to development such as in new foods and medi-

But Mr Alfredo Homa, a scientist at the Agricultural Research Institute in the Amazonian town of Belem, says: "People say the biggest richness of the Amazon is its biodiversity and thus all activities such as ranching should be stopped but while people have not identified species this makes little sense. It is an

Dozens of species may be disappearing each day, reports **CHRISTINA LAMB** 

untouchable wealth." Scientists are now hard at work mapping the biodiversity of the Amazon, but our precarious knowledge of species and

the difficulties of assigning real values remain a problem. Mr Marcos Azambuja, Brazil's chief negotiator for the Earth Summit, describes biodiversity as the most complex issue on the summit agenda: "We used to think of the world as divided between useful things, and things that God created for his pleasure. Now we see that everything may have a purpose and thus every-

thing must be sacred."
The major difficulty in agreeing a convention on biodiversity is that most of the planet's species are concentrated in

An African Ilon at Londolozi in eastern Transvaal: biodiversity refers to all the species of animals, plants and micro-organisms. As the earth's rich biodiversity diminishes, some scientists believe that a species is lost every 30 minutes. Picture by Glyn Genin.

poor countries while the technology and knowhow to benefit from them through development of products are in the hands of developed countries. As naturally-occurring species currently have no real value, poor countries have no incen-

tive to conserve them. In order to maintain their biodiversity, under-developed or developing countries, such as Brazil, are asking for a transfer of technology and funds and suggesting that communities where important plants are found should be given a share of the royalties

of the final product. Mr Azambuja says: "The idea is to introduce a minimum of order into the forest - the jungle should not be treated by the law of the jungle."

Defenders of forest people argue that they should receive royalties because these people are in fact informal environmental scientists who have developed a wealth of knowledge of the medicinal properties of plants over centuries.

But Mr Jose Goldemberg. Brazil's Environment Minister. a nuclear physicist, argues against this: "You might find an important cure in a tree or you might not. What's important is establishing the link between plants and cures, and for that we need science, an enormous amount of training and equipment - and

"Finding the herb is a very small part of process which leads to the final product on sale in the drugstore."

#### Global Commons Institute (GCI)

GCI is now co-ordinating one of the 2 the link between equity and survival working groups in the Human Dimen-globally, whilst seeking to protect the sions of Global Change (HDGC) research programme. This programme runs under the auspices of the International Federation of Institutes for Adranced Study (IFIAS).

# Protect the environment – and protect your bottom line

If your business is damaging the environment it will also damage your profits and the asset value of your company.

First your profits: These days feelings run high on environmental issues, a company with a bad image will inevitably suffer public displeasure in the form of decreased sales. Also of course, manufacturing processes are now strictly controlled under UK law with fines and even imprisonment as the penalty for not conforming to the new legislation.

Now your assets: Contamination of buildings and land can virtually wipe out their value, simply because of the cost of decontamination. Even the suspicion that it may be necessary can cause a sale to fall through.

We have seen it happen many times.

The solution: Call the RPS Group plc. As a

quoted company we understand the commercial pressures on you. We have 25 years experience in assessing the implications of environmental damage and, more importantly, how to solve the problem. Our environmental risk assessment programme analyses every aspect of your business, pinpoints current and future problem areas and comes up with a solution. It's not just the global issues that should concern us all. We should also look at our own doorstep.

Now we're really at the bottom right hand corner: call our Managing Director, Dr Alan Hearne, on 0235 812191. Or our Environmental Science Director, Dr Graham Parry, on 0244 313486. Or write to: Dr Alan Hearne

world's forests.

If USE of trade bans as a stick with which to bludgeon poor countries into adopting better environmental policies is unlikely to be effective, and is probably playing into the hands of protectionists, according to recent studies from the World Bank and the General Agreement on Tariffs and Trade.

While free trade is no panacea, co-operation will produce better results than coercion, says Mr Lawrence Summers, vice-president and chief economist of the World Bank in a new report on Trade and the Environment. Developing countries in particular should not be forced to take action they cannot afford, such as strictor environmental legislation, he argues.

The Gatt and World Bank reports, intended to fuel debate at the Earth Summit in Rio de Janeiro, acknowledge that the failure to take proper account of environmental costs has led in some cases to environmental degradation. But they also argue that blanket harmonisstion of environmental regulation, sought to ensure fair competition between exporters, is inappropriate and runs counter to accepted principles of international trade.

Trade measures may be justified as environmental policy "in very narrowly defined circumstances" they argue. Indeed Lawrence Summers notes that "in the case of worldwide problems like global warming or in the case of regional problems like acid rain, there is no viable alternative to International co-operation." But at the same time, he insists that "there is almost always a better way of meeting

environmental objectives."

The bank debunks the "deep ecology" view that environmental assets, such as rain forests or endangered species, have infinite value, and from this, argues that countries have a right to decide what value they give to environmen-tal quality, traded against the need to provide jobs, relieve poverty, provide proper health care and education.

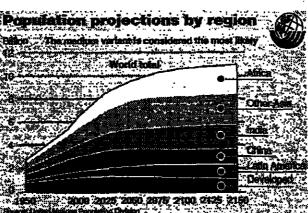

The reports are also valuable in providing substance to the argument over whether "dirty" industries are migrating to countries with lax standards. They concede that the amount of "dirty" industry output in developing countries has grown steadily over the past two decades, but suggest that this has more to do with the stage of industrialisation of many developing countries than any other factor.

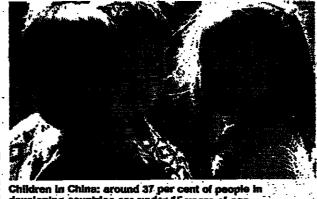

TUDIES in Chile and more widely across Latin America also contradict the claims that free trade leads to environmental degradation and that industries migrating to developing countries seek comparative advantage in their lower environmental stan-

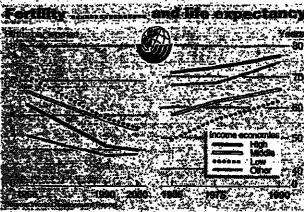

On the contrary, it is pro-tected markets like those of eastern Europe that have harboured inefficient companies using pollutive technologies. rather than open ones.

Several reasons are given for this: companies have become fearful of liabilities arising in the event of environmental accidents, and are sensitive to the demands of "green" con-

sumers in export markets. "The source of the problems is not in trade, but in the need common production standards to [take proper account of] n all plants, wherever they are environmental costs."

There may well be 10bn people on the earth by the year 2050

## Population surge is a crucial issue

THE WORLD'S popula-tion is growing at an unprecedented rate, consuming more resources than ever - nearly a billion people will be added to the planet during the 1990s, according to the Worldwatch Institute. As the number of poor people is increasing, human migration is growing and renewable resources, such as water and land are increasingly under

Such realities make the population issue a crucial one for sustainable development. There are about 5.5bn people in annual increase of 97m projected for the coming decade.

International experts agree that population growth rates will have to be reduced, and the pattern of human activities changed, if ecological catastro-phe is to be averted.

The two go hand-in-hand because it is not simply high population growth rates that are threatening the environment. Developed countries, with relatively low birth rates, consume most of the world's resources. A Bangladeshi, for example, consumes energy equivalent to three barrels of oil a year, a US citizen 55 bar-

As Oxfam puts it: "Industrialised countries generate signifi-cantly more damage per person

to the global environment than do people in developing countries." Sustainable development

therefore calls for a fairer dis-tribution of the benefits of development among the world's people.

High population growth rates in developing countries - where 80 per cent of the world's population lives -

will, nevertheless, put even greater pressure on the world's The higher the population in developing countries, the higher their energy use and pollution, especially as econo-

mles develop. More water is

cleared, inappropriate agricul-tural practices increase and wildlife species disappear. Population growth in developing countries is responsible for about 79 per cent of deforestation, 72 per cent of arable land expansion and 69 per cent of the growth in livestock num-

Such problems are further compounded by the increasing migration of people - to urban areas and to environmentally sensitive inland areas – in search of productive land and

Addressing high birth rates means addressing poverty in such countries, say international agencies. More than 1bn

people live in absolute poverty without adequate food, clothing or housing.
North-South relationships

regarding debt, trade, aid and technology transfer are seen as longer-term means of tackling poverty. Programmes to tackle high birth rates focus on improving third world health and education, and providing readily available and afforda-ble family planning.

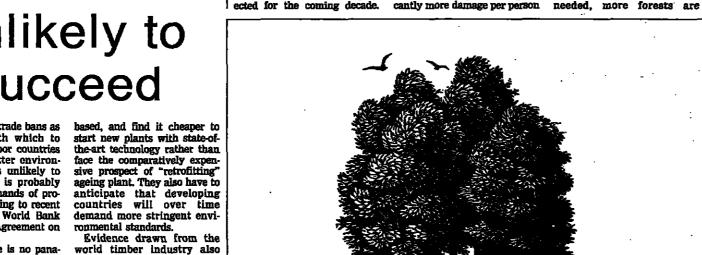

Practice shows that birth rates can be reduced voluntarily by raising the status of women through education and providing them with opportunities other than the traditional child bearing role. it isthought that more than one in

tries may be unwanted The worst case scenario for the population explosion is that there could be 12.5bn peo-ple in the world by 2050 if The most likely scenario is a

figure of 10bn people. Fertility patterns can change in just one decade. Develop ment and consumption patterns will have to follow suit, says the United Nations Population Fund.

"World resources are adequate for the sustained development of the planet - if they are carefully used," it warns.

#### Third World countries are increasingly reluctant to take advice from industrialised nations, writes Stephen Fidler

OR DEVELOPING country governments, the industrialised world's new-found concern for the both a threat, and an opportu-

The threat, as they see it, is that international pressure will be applied to force them to forego growth by placing restrictions on their ability to use their own natural resources. Having enjoyed the benefits of economic growth at great environmental cost. industrialised country governments are now seen as wanting the third world to forego development in order to contain further environmental damage.

For some governments, the first world's attempts to interfere with the environment policies in the third world smack of old-style imperialism.

Moreover, advice is not welltaken from countries whose own environmental records are poor and whose use of the world's scarce resources is so much more intensive than the developing countries'.

Dr Lim Keng Yaik, the Malaysian Minister of Primary Industries, says: "We feel offended that the whole discussion on the environment in the last few years has been a finger-pointing exercise centred on countries who are commercially exploiting their forests."

The opportunity is that, for the first time in years, the developing world has discovered it has leverage over the industrialised economies. If rich countries want the developing countries to take environmental action, the benefits of which will be widely dispersed, then there will have to

The bill for environmental action will probably be high: according to the UN secretariat for the Rio conference the extra annual cost in aid from the rich countries would be

Many developing countries take the position that this should be entirely additional to current aid budgets. The World Bank has made more modest

their different perspectives on environmental priorities. In most developed countries of the north, the main concerns

are issues such as carbon diox-

ide emissions, ozone depletion,

photochemical smog, acid rain,

toxic waste and the loss of rare From a poor country viewpoint, the pressing environmental issues tend to be smaller in scale and of which the international ramifications are smaller: water supply and sanitation, soil erosion and desertification, and local air

Global warming does indeed imply dangers for people in low-lying poor countries, such as Bangladesh and Egypt, and threatens the water supplies of others across the world, but many more people are seen as more immediately at risk from local environmental problems. The World Bank has estimated

that, for example, 200m people rely for sustenance on shrinking tropical forests, 1.2bn lack adequate safe water and 1.8bn proper sanitation, and 1.3bn people are exposed to unsafe conditions caused by soot and From this perspective, pov-

erty is the threat to the environment and the solution to poverty is growth. Thus, at least on the face of it, third world governments put themselves at odds with the many, mostly first world, environmental pressure groups that see growth as the greatest environmental threat.

In its 1992 World Development Report, the World Bank describes the idea of a trade-off between environmental protection and growth as a false

"Without adequate environmental protection, develop-ment will be undermined; withnorth and south reflect in part out development, environmental protection will

fail." it says. Developing coun tries are suspicious of the Global Environmental Facility (GEF), the fund administered by the World Bank through which developed countries want to channel their environment-linked aid.

Sensitive to their national overeignty, they fear that the conditions which will be imposed on the aid will further increase the rich countries' grip over them.

As well as finance, they want access - unimpeded by restric-tions on intellectual property - to clean technology; they see themselves as entitled to some financial flows from holding back on the development of their forests; and they want to capture some of the economic benefits that may arise out of the preservation of biodivers-

For their part, most industrialised countries have thus accepted that the threat to the global environment is two-fold: spreading poverty in the south and poorly-regulated industrialisation in the north, although the extent to which this consensus will be converted into action is still

In recent months, the debate appears to have become less heated and the positions less entrenched. The summit will inevitably fall short of what many environmentalists consider minimum objectives. But a framework should be be established for the future discussion of a variety of environmental issues on a global and on a national scale.

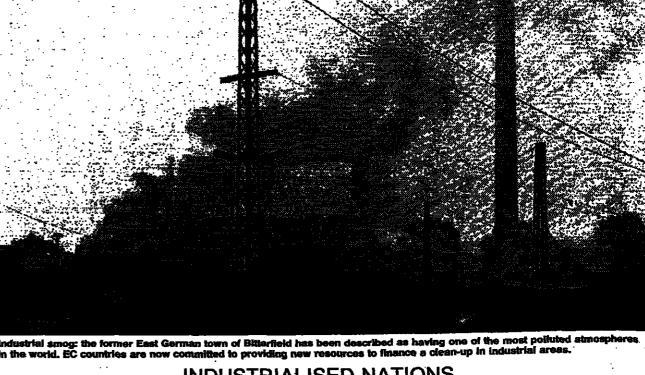

More finance will be made available to halt environmental degradation and the GEF (now with about \$1.3bn in commitments) expanded, and made more receptive to the concerns

of developing countries. President Fernando Collor of Brazil, the host of the Rio summit, points to the decision by President Bush to attend the conference, and breakthroughs made in preparatory meetings over the last few months. As a result, he says he views

the prospects for the conference much more optimistically

than he did a month or two

said he would not be going to a meeting "where everything was fixed in advance" and would lust produce "words. obligations and precise understandings" on how to cut carbon emissions.

INDUSTRIALISED NATIONS

## Conflicting viewpoints

THE INDUSTRIALISED countries may agree that the world's environment is under threat, but they differ on the seriousness of the danger and what should be done about it. Nothing illustrates this better than the reluctance of President Bush to commit himself to attend Rio until the eleventh hour, despite the

Europe and Japan. Yet it is the industrialised countries who will be expected by the rest of the world to take the lead in mounting a clean-up, and in financing the Third World's efforts to overcome its environmental problems. The strength of these countries' support will therefore be crucial to the outcome

Industry viewpoint: Frank Popoff, president of Dow Chemical

## Business warms to plans for balanced development

viewed as the villains of Lthe environmental war. will also be gathering in Rio for the summit. But according to Mr Frank Popoff, president and chief executive of Dow, the US chemicals group, they will be coming in a non-adversarial

We need to reduce the adversarial relationship that has existed so far - then, through mutual effort, we can actually achieve something," he says. The summit offers an opportunity for industry to raise its credibility and demonstrate the many ways it is committed to sustainable development - balancing economic growth with environmental

concerns, he believes. The minimum that should be achieved is that Agenda 21, an 800-page action programme which will flesh out the principles in the Rio declaration, should provide the template for global environmental reform, creating a framework for minimum pollution and maximum product, Mr Popoff argues.

By coming together and talking about Agenda 21 we must be less political and more pragmatic in our approach," says Mr Popoff, There's no point being utopian, but we must change course to sustain-

able development."
The chemical industry vies according to Mr. Popoff, chem-

And the transfer of the control of

NDUSTRIALISTS, often istry has an important rôle to play in reducing pollution. Modern pesticides have been developed, he observes, which require grammes rather than tonnes per hectare, and are decomposing extremely quickly.

However, he stresses the importance of self-regulation within the industry as well. and the need for the sector to pre-empt national regulators from setting up different standards in different countries.

Too many companies still regard waste and emissions reduction as something they must do to satisfy outside agencies rather than something they can do to realise economic gain.

Dow has been running a campaign called "Wrap" -Waste Reduction Always Pays - for the last five years, based on the premise that the best approach to environmental problems is not to produce pollutants in the first place. The company has also set up a yield improvement programme that searched for ways of using fewer raw materials and less

energy per unit produced. Dow's policy towards plastics has been driven by the need to control waste. The company is continually searching for ways to prevent pollution rather than dealing with it at the end of pipeline; it also aims to the product.

Frank Popoff: he warns that if the chemical industry falls to regulate itself, the price

The principle of sustainable development fits in well with Dow's existing philosophy, says Mr Popoff That is why the group has been quick to back the proposals. Mr Popoli warns that the

price to be paid if the industry fails to regulate itself is chaos. In particular, if different standards are set up in different states, then the issue of pollution will become even more hopelessly intermingled with trade issues. Trade and the environment are already in a hopeless mess, he says.

The solution to pollution must be based on market prin-

may be politically controver-sial, but by raising prices it would have the great advantage of reducing inordinate use. We must have a universal gasoline price." Mr Popoff admits such a move would be politically difficult, but the electorate might well be interested in a politi-

#### THE EARTH SUMMIT

Profile: Maurice Strong

#### Man with a global mission

WHATEVER the outcome of the Earth Summit, the fact that it is taking place at all is due largely to a short, bustling Canadian with a cheerful face: Maurice Strong.

For the last two years, Maurice Strong, secretary general of the UN Conference on the Environment and Development (Unced), has roamed the world from his office in a faded mansion on the outskirts of Geneva. drumming up support for the event. As preparations reached their climax earlier this year, he was visiting a different continent almost every day.

Not bad going for someon who recently celebrated his 63rd birthday, writes David

But Mr Strong has brought a dash of passion to his job - in addition to the patience and good humour which he has needed to keep things moving, particularly during the last few months when it looked as if Rio was getting

hopelessly bogged down. "The environment is not a matter of dealing with a few pollution problems," he says. 'We've gone far beyond that. It exposes the underlying echnological malaise of our civilisation. We have not done it deliberately, but we have

lost our innocence For much of his life, Mr Strong was a busine holding senior positions in Petro-Canada and Power Corp. of Canada. In the 1970s he became involved in the UN's growing environmental efforts. Although he returned briefly to the private sector after that, he was again drawn into the UN during the 1980s, eventually acquiring the job

If he imagined that mounting concern about the state of the planet would make his job sv, this has turned out to be far from the case. As the preparations exposed ever

deeper divisions between the rich and poor, the greens and industry, governments and lobbyists, Strong was increasingly cast as a mediator, hunting for points of agreement, soothing, encouraging, prodding. .

He had to contend with a rising barrage of scepticism in the media – which he dealt with by granting hundreds of interviews in which the message usually boiled down to: "Yes, there are problems, but we're getting there."

He has his critics too, particularly in the industrial world where he is viewed as siding too closely with the interests of poor countries and over-simplifying the issues

as if the environmental debate is still the same as in 1970. It has matured a lot since then," says a European official. In his efforts to

accommodate as many interests as possible Strong also allowed the Unced agenda to halloon to an enormous size When Unced was asked to produce cost estimates for the global clean-up, it put them at an astronomical \$625bn a year. With firmer leadership. Strong could have focussed the Rio agenda more tightly, and avoided accusations of financial megalomania.

Strong is, needless to say, optimistic about the outcome. There may be fewer treaties on the signing table than was originally hoped, there are still big question marks about aid money, and many of the largest interest groups still fear the Summit will be a sell-out to their rivals, or a <u>massi</u>ve anti-climax.

But Strong stresses that Rio was never intended to come up with a complete environmental rescue plan. What it must mark is "a credible beginning," with forceful arrangements to ensure that the great clean-up, once set in motion, keeps

going.
"I've been around this for a long time. I've seen the evidence. I believe we are facing an environmental crisis. The planet is more threatened today by the danger to its life systems than it has ever been

The business community is anxious about the threat of 'green taxation' and over-regulation

## Big companies are keen to look green

HE business world has mixed feelings about Rio.

which think of themselves as responsible on green matters are glad to see the state of the planet high on the global agenda. But many others view Rio with apprehension: could it lead to tougher green rules and new taxes? Can business' quest for profits be reconciled with a

One man who thinks the answer to that question is yes, and has been prepared to spend some of his considerable personal fortune to back it up is Mr Stephan Schmidheiny, a private Swiss businessman who chairs the Business Council for Sustainable Develop-

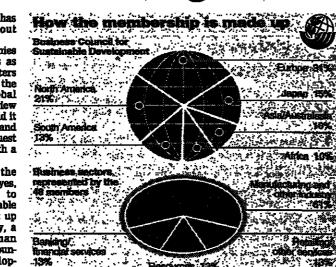

He argues that business should see the environment in the same light as research: something you spend money on without the prospect of immediate gain, but in the hope of securing long term menits. In this case, the benefit would be greater efficiency in addition to whatever moral or public relations value a company acquires through being green - "companies should see this as another opportunity for competitive

dvantage-gaining." Mr Schmidheiny recently published a kind of business-man's green manifesto, "Changing Course", which argues that business can make a contribution to solving the world's ecological problems, provided there are free and open markets, and regulations treat everyone fairly.

The alternative to business' willingness to co-operate would be a draconian regulatory crackdown which would harm everybody, the book warned.

The business viewpoint will be put at Rio by the International Chamber of Commerce. The ICC, with members in 112 countries, has drawn up a business charter for sustainable development which has the packing of 750 leading companies around the world.

They undertake to recognise environmental management as high corporate priority, but they will also be advancing the message that competition must

Despite the desire of top industrialists to portray themselves as environmentally concerned. Rio comes at a time of mounting frustration within the business community over

the growing regulatory burden.
Only three weeks before the start of Rio, a survey by Price Waterhouse of manufacturing companies in the UK's industrial north showed them chaiing under environmental regulations. And in the US President Bush lifted certain species controls which were obstructing the lumber busi-

ne of the results that the business community is seeking from Rio is closer co-operation between governments on environmental matters, so as to ensure that some countries do not adopt tougher rules than others, and put their exporters at a disadvantage.

"We need an umbrella being put up at Rio," says Mr John Collins, the chief executive of Shell UK, and chairman of the UK government's Advisory Committee on Business and the Environment. He says Shell is ready for measures like a carbon tax which might suppress demand for oil, provided it is applied to all industrial

Although such a tax would hit at Shell's products, Mr Collins says his company would be ready to reposition itself to supply cleaner fuels - "we've already taken that step mentally," he says. He accepts that governments will have to make what he calls "fiscal tweaks" to encourage environmental shifts. But he also believes that the prices of goods and ser-vices must increasingly reflect the environmental costs in production, use and disposal.

In Japan, the big corporations have recognised the needs of the environment, but are now confronting the realities of dealing with it, says Mr Michio Hashimoto, an adviser to Japan's Environment Agency.

Although the financial services industry is less exposed to environmental issues than industry because it does not process raw materials, environ mental pressures are beginning to make themselves felt there too. A group of 31 leading European and Japanese banks recently endorsed a UN accord on sustainable development. The document committed them to pursue best environmental practice in the management of their own affairs and also to take account of their clients' environmental risks when

assessing them for loans. Bankers are worried that they might be made liable for the environmental infringements of their borrowers.

Summit is 'a unique opportunity,' says Michael Howard

## The start of a process

claims to have played a special role in the realisation of the Rio Summit. It was during his recent trip to Washington that the US agreed to the proposed Convention on Climate Change which opened the way for Preident Bush to say he would attend Rio.

Whether or not Mr Howard was the honest broker who brought this about, he maintains that the compromises made on the convention were well worth it in order to get the US on board.

"It is very important that the US is going to Rio," he says. "All should be involved in this

Not that Mr Howard has had a chance to build up a track record on the environment. He only got the job after the Conservatives won the election in April, having previously held positions in the trade and employment departments. And he was quickly denounced by the green lobby for engineering a sell-out over the Climate

Convention. But Mr Howard is prepared to lay considerable store by Rio - "it is a unique opportunity which must not be squan-

Michael Howard, the UK's new environment m dered," he says. Although he hopes to see "meaningful agreements" signed in Rio, he stresses that "it is not the end but the start of a process."

Efficient arrangements will have to be put in place after the event to monitor the implementation of the agreements.

As a representative of one of the leading industrial countries, he will be under pressure in Rio to contribute to the

enormous funding require-

ments of the Third World to

meet environmental targets. But this is one subject on which he prefers not to comment in detail.

"The UK commitments remain to be seen," be says. He recalls that the Tories' election manifesto committed the IJK to increasing its aid to the equivalent of 0.7 per cent of GNP. And his predecessor, Michael Heseltine, pledged that the UK would make "new and additional funds" available for Rio But, as Michael Howard points out, there was no timetable.

Mr Howard is not alone from the developed world who are reluctant to show their hands ahead of what are likely to be tough negotiations over the money. And this heightens the danger that the Rio Summit will fail to deliver on its

Michael Howard advises people to be cautious in their hopes for the summit - "if they think it will solve all the problems, they will be disappointed," he warns.

"But I hope they have more realistic expectations. This is, after all, the first attempt to tackle global problems on a

Disappointment among environmental pressure groups

### Cause for concern

HOUSANDS of environmental pressure groups all round the world have been closely involved in the preparations for Rio. When the idea of the summit was first mooted, many of them were delighted that the environ had finally reached the top of global priorities.

But since then, disenchantment has set in. The succession of compromises and cut-backs in the agenda have left them with dark forebodings

A few weeks ago a number of them including Friends of the Earth and Greenpeace, put out a joint statement saying: "It appears that the Earth Summit is falling to meet its challenge and instead moving in the opposite direction from the path it must forge to save the planet from destruction. Barring a dramatic change of course, it is heading toward a

failure of historic proportions."

The World Wide Fund for Nature, the Swiss-based group, is also worried about the "lack of political commitment" by participating governments, according to one of its officials, Gordon Shepherd. Even so, WWF has dispatched nearly 30 experts to Rio to press for more

Despite the apocalyptic language, the green groups do have genuine cause for concern. They are worried at the lack of agreement on measures to stem the degradation of the global environment and disappointed that they have not been allowed a more significant role in the preparatory

☐ SHADES OF GREEN: the environmental movement is large, often bewildering assortment of interests and ideologies. Cambridge Energy Research Associates, the US consultancy, has created this "prism" which shows how

treatment facilities.

An issue underlying the labyrinthine discussions at Rio is technology transfer

## Technology alone is not enough

VERYONE is aware that, if practical progress is to be made on any of the specific problems, from global warming to the extinction of wildlife species, scientific knowledge and technical skills will have to be transferred on a huge scale from industrialised to developing countries.

Yet "technology transfer", a frequent incantation in the preparatory work for the Earth Summit, is poorly defined and understood differently by people on opposite sides of the North South divide.

Politicians from developing countries tend to imagine that the industrialised world contains a treasure trove of advanced technology, locked up by greedy companies and insensitive governments.

They see the system of protecting intellectual property through patents as a particular barrier to setting poorer nations on the path to clean

The western point of view shared on the whole by governments, companies and environmental groups — is that the Third World's pre-occupation with hi-tech is misguided. Indeed, as Mr Chris Rose, programmes director of Greenpeace, notes, "the South has become particularly obsessed with biotechnology.

The United Nations preparatory committee for the Earth Summit pointed out that "a large body of useful technological knowledge lies in the public domain and is unaffected by the international patent system. Also, most proprietary technology is available through commercial channels."

The barriers which developing countries have to overcome before they can tap this pool of knowledge are, in order of increasing size: finding out about the appropriate techniques; establishing the infrastructure to introduce them: and, above all, paying for

Several regional and international clearing houses already exist to exchange information about environmental technology. A fairly wide-ranging example is the UN Environment Programme's Industry and the Environment Office in Paris. Others organisations

ter. Many of the world's leading chemical co

transfer information in more specialised fields.

One new example is the International Service for the Acquisition of Agri-biotech Applications, which is being set up at Cornell University, New York.

It aims to tell farmers in developing countries how to increase yields while using less pesticide; ISAAA will concentrate on passing on biotechnol-ogy which has been tried and tested in the west and which can be introduced without disrupting traditional agriculture.

But the Earth Summit organisers are looking for a great expansion in the network of technology information exchanges. They estimate that the international community would have to contribute \$150m to \$200m a year to their running costs.

The UK government commissioned two studies of technology transfer by the consultants Touche Ross, to help prepare for the Earth Summit. One looked at climate change and the other at biodiversity. Both concluded that aid agencies have concentrated too much so far on transferring "hard" technologies and have seriously

neglected maintenance pro-

grammes and "soft" technolo-

gies such as training and The Earth Summit organisers are looking for a great expansion in the network of

technology information exchanges

developing local skills. "People tend to regard technology transfer as handing over the blueprints for a process," says Mr John Coler environmental affairs manager for ICI, the UK-based chemicals

But it's much more complex than that. Handing over the blueprints is only about a third

of the story,"
As Mr Coleman points out, if you build a chemical plant in a developing country without training the operators properly, "people could do immense environmental damage by

operating the plant wrongly."
The international chemical companies no longer build cheap and dirty plants in the Third World. They now try actively to transfer the best environmental technology to their subsidiarles.

The ICI policy, in the somewhat cumbersome phrasing of Sir Denys Henderson, chairman, is that the company will "build new plants anywhere in the world to the (environmental] standards which we can reasonably foresee will be required in the most demanding country in which we operate the particular process." But even if western compa-nies build the cleanest and

most advanced plants in devel-Clive Cookson Profile: Brazil's Environment Minister

Since the beginning of the year, a number of events scheduled as part of the SP ECO 92 Special Project have been contributing to the discussion of São Paulo State's and Brazil's environmental problems, as well as to raising the population's environmental consciousness. But the State Government's efforts in this area go further.

Among other projects, the following are underway: eliminating the pollution of the Tietê, Guarapiranga and Paraíba do Sui basins.

Soil and Atlantic Rainforest conservation.

Protecting the Juréia-Itatins region by expropriating 82% of its area.

Surveillance of rainforests by means of the Landsat 5 satellite - "Green Eye".

A total of 400 municipalities participate in Operation Fire Fighting, São Paulo State's forest-fire-prevention effort.

There is the Macrozoning Project of the Ribeira Valley. And the Forest Development Plan, which generates a great many seedlings, plantings and trees throughout the state.

Among other pollution-fighting initiatives are those of the Industrial Pollution Control Program --- PROCOP -and the Automotive Air Pollution Control Program - PROCONVE.

Finally, there are projects such as the renovation of

São Paulo City's Botanical Garden, which recently reopened its gates to the public. Help us protect nature. Nature is our common heritage. Nature is life.

## INVESTMENT IN QUEBEC

**SECTION IV** 

Tuesday June 2 1992

In business, politics and culture, Canada's francophone province has become one of North America's most vibrant regions. In this survey Bernard Simon looks at Quebec's assertive industrial strategy and

some bulwarks of its economy

## **Political** heat grows

always been among the least troubling concerns for anyone doing business in Canada, but not this year.

The question whether this vast country will remain in one piece and, even if it does. how it will in future be governed, is worrying business people and politicians alike. The ups and downs of the currency and bond markets in Toronto and Montreal are explained these days as much by the mood in the hothouse of constitution-writing as by the latest GDP or CPI numbe

At the centre of Canada's latest and most searing identity crisis is French-speaking Quebec - as it has been at almost every period of stress in the Canadian federation for the past 125 years.

The linguistic and cultural divide between Canada's "two solitudes" has opened a similar rift on economic and political issues between the 6.5m Quebecers (about four in five of whom are French-speaking) and their 20m English-speaking countrymen.

As their horizons have broadened over the past 30 years, Quebecers have gained confidence in their ability to be

nine other provinces.

the rest of the country, many Quebecers had ample reason in 1990 to believe that the cost of going it alone would be easy to bear. Buoyed by the successes of a new generation of asser-tive French-speaking entrepreneurs, the corporatist state of Quebec Inc. was riding high. No other Canadian province was more enthusiastic about the 1989 US-Canada free trade

extra powers and recognised its distinct identity, in

exchange for its signature on

Quebecers were assured that their economy was as big and robust as Austria's or Denmark's. Often more at home with Americans than with English-speaking Canadians, Quebecers assumed that the economic costs of a break with Canada could be compensated for by closer links with the US. Yet although by late 1990

and through much of 1991 a clear majority of Quebecers was tilting towards some form of independence, the pendulum has recently started to swing in the other direction, and much of the enthusiasm for a break-up has dissipated. Quebec is set to hold a referendum on its political future by the end of October. Whether the question will invite an outright yes or no to sovereignty, or whether it will merely gauge support for proposals from the rest of Canada for a new constitution, there is a growing sense that Canada will survive in one piece - at least for the time being.

less likely to be caused by any hell-bent desire for independence on the part of Quebec, than by regional jealousies in other parts of the country, especially the western province of Alberta. Canada, including Quebec, is still sadly lacking in politicians bold enough to put the national interest ahead of their narrow, regional biases. In fairness, the recent turnaround in public opinion

thine on Jacques Cartier aquare in Montreal: the city, like the province, has a strong will to survive and grow again

within Quebec does owe almost as much to cooler heads in the rest of the country as it does to disenchantment with separatism. The separatists' cause has been damaged, too, by political and economic developments,

some of their own making.
With the exception of neighbouring Ontario, Quebec has been hit harder by the recession than any other part of Canada. Unemployment in the province is now above 12 per cent, and is likely to stay in double digits for some time. Forestry and mining, two cornerstones of the provincial economy, are struggling to

overcome not only a worldwide drop in commodity prices, but also their own high costs.

The province's vulnerability to forces beyond its control was underlined last March, when the New York Power Authority cancelled a C\$17on electricity contract with Hydro-Quebec, the huge government-owned power utility. The cancellation means, at best, a two-year delay on the next stage of the world's biggest hydro-electric scheme on the rivers flowing into Hudson

Meanwhile, federalist business leaders in Quebec, both English and French-speaking, are becoming more outspoken in warning of the costs of a split. "No one is suggesting for one minute that the battle is won." says one prominent

things are definitely going in the right direction."

Although the separatists can draw on innumerable studies to claim that an independent Quebec would not be much worse off, they have had difficulty demonstrating that a break from Canada would bring tangible benefits. Federalists, on the other hand, can tick off a long list of likely costs, from the loss of federal civil-service jobs to the possibility that Quebec would have to renegotiate the free trade reement with the US, and the threat of ugly border dis-putes with Canada and with

Quebec's own aboriginal peo-The separatists have weakened their own cause by trying to have it both wavs. Mr Jacques Parizeau, the Parti Quebe

Morin, one of most senior ministers in the Parti Quebecois government in the late 1970s. admitted that he was a paid mole for the Royal Canadian founted Police.

Some of the credit for Que becers' new willingness to strike a deal with the rost of the country belongs to Mr Rob ert Bourassa, the province's premier since 1985. Mr Bourassa is one of Canada's most shrewd politicians. One foreign diplomat likens him to a crab: "He keeps moving sideways. but-always seems to get to where he wants to go."

After years of Delphic comments on his own attitude rassa and his ministers have recently made some gentle ges-tures towards the rest of the country. Quebec has signalled a softer line, for instance, on its French-only language laws, notably Bill 178, which requires French-only signs on buildings, store-fronts and billboards. Mr Bourassa's decision in 1987 to override a Supreme Court ruling against Bill 178. was a milestone in souring English-speaking Canadians'

Eatigue with the interminable constitutional wrangle has fiself improved prospects for a settlement later this year, but the risk is that a solution produced by compromise instead of leadership will be unwieldy, and thus not very durable. In response to Quebec's demands, whatever deal is put together will include a transfer of nowers - notably worker training and culture - from an already weak federal government to the increasingly assertive provinces. Western and Atlantic provinces are likely to burden the parliamentary process with new checks and balances, notably a more powerful Senate. consisting for the first time of elected members.

A Quebec comedian once quipped that "what Quebecers want is an independent Quebec within a strong and united Canada". It would be a sad irony if after all these years of soul-searching and negotiating,

#### INDUSTRY

## Clusters hold key to markets

other parts of Canada.

However, implementing a far-reaching industrial strategy is less simple than it used to be. The ability of the government to use financial sup-

Each diagram, with a complex pattern of lilac, orange port as a tool of its industrial policy is constrained by its C\$4bn budget deficit. and pink boxes (some of the boxes are multi-coloured) represents one of 13 industrial Furthermore, Hydro-Que-'s construction programme These are the sectors which

will slow down sharply in the second half of the decade, forcing many local companies to chance of being competitive in look elsewhere for contracts. Mr Pierre Fournier, research director at Levesque Reaubien Geoffrion, Quebec's leading securities firm, predicts the government will be able to give little more than moral support to the new industrial

cluster concept.
"I like it, but it's going to
take a long time," Mr Fournier

The 13 clusters fall into two groups. Five sectors - aerospace, pharmaceuticals, information technology products, power generating equipment and metal processing - are well-established both in domestic and international markets.

According to Mr Paul Lus-Getting everyone to pull in the same direction has been sier, director of investment services in the ministry of industry and commerce, Quewith a tightly-knit, homogeneous population. There is far bec has reached a point where "no major pharmaceutical

more job hopping between the company does anything in

"If we could do that in five or six sectors, we'd be in great transport equipment, petro-chemicals, agri-business, textiles and clothing, forestry,

housing, environmental prod-ucts, and cultural industries. Several of these sectors have faced severe competitive pressures in recent years, and will need a shake-up if they are to fulfil the hopes being placed in them. Their inclusion as clusters is partly a recognition of the province's natural resources and of these sectors vital importance to regional

development.

Each group of industries has set up a task force to identify its strengths and weaknesses. In addition, the province's 16 regions have been asked to submit a cluster wish-list within the next few months.

Mr Tremblay sees the gov-ernment's role as a catalyst. "It's a big puzzle and we put all the pieces together," he says. For example, vigorous arm-twisting by Quebec has persuaded the federal govern-ment to locate a new Canadian space agency in Montreal. A forestry technology centre has moved from Ottawa to Quebec

Among the products of col-laboration with business tak-

ing shape is an institute for pharmaceutical research in Montreal. Twenty-one brandname and generic drug makers have each contributed

C\$100,000.

The federal and provincial governments have chipped in another C\$6m between them. In spite of budget constraints, some government

money is available for individual companies too. Since 1987, over 1,000 businesses with C\$519m in loans. While the loans are repayable, the terms are generous.

Principal repayments on a

moderniŝation loan, for example, normally start only in the seventh year.

Numerous tax incentives are available. Research and development expenses enjoy tax credits of up to 40 per cent. But in an effort to nudge academics towards practical research, the credits are doubled for R&D undertaken in northership with a university.

Poreign investment is an important part of Quebec's industrial strategy. US, Euro-pean and Asian companies have large stakes in many of the 13 clusters, as well as other parts of the economy. Two of South Korea's biggest North American investments are in Quebec, in the form of a Hyundai car plant in the eastern townships and a Sami Steel factory in Montreal.

Much of the emphasis in the years ahead will be on attract-ing more Asian capital. The government has just opened a trade and investment office in Vancouver, with a mandate to try and divert to Quebec some of the money flowing into Canada's western provinces from Hong Kong, Taiwan and Singa-

THE ECONOMY

## Positive business culture is a silver lining

THE GUSTO with which the people of Montreal celebrated the city's 350th birthday last month can be interpreted either as a sign of Quebec's eagerness for some distraction from the tough times of the past few years, or its confidence that the worst is behind

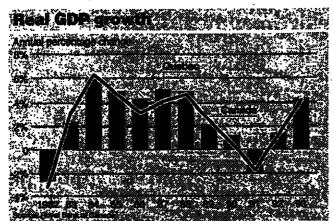

Ontario, Quebec has borne the brunt of the downturn in the Canadian economy. Output shrank by about 2 per cent last year, after barely rising in

Several of the province's biggest companies, including the construction group Lavalin and retailers Provigo and Steinberg, have experienced severe financial problems. Canadian Pacific, the venerable railway and resource con-glomerate based in Montreal, lost C\$40m in the first three months of this year.

Quebec's unemployment has climbed to 12 per cent and Montreal is reputed to have one of the highest rates in North America. Problems of high interest rates and a strong currency were exacer-bated by Quebec's relatively heavy exposure to industries which were hit by the cyclical slump in demand and also suffered from more deep-rooted structural handicaps.

The impact of the senaratist campaign is unclear. But it has certainly not encouraged local businesses to invest, nor has it helped attract capital from elsewhere. Royal Bank of Canada said in a recent report that political uncertainty "will constrain investment growth" in the province. The chief executive of a large insurance group in Montreal added that his company was unlikely to make any substantial new property commitments in the province until the political picture was

If there is a silver lining to the political turmoil, it is the positive business culture which continues to make Quebec one of Canada's most hospitable provinces to both domestic and foreign compa-

nies. While captains of commerce and industry in Ontario are harshly critical of their province's fiscal and labour policies, premier Robert Bourassa's Liberal government in Quebec has a comfortable relationship with the business

Quebec was among the loudest cheerleaders in Canada for the 1989 free trade agreement with the US. Although recession and mounting competition from US suppliers have taken some of the shine off free trade, Quebec generally supports Ottawa's participation in the talks with Mexico to create a North American free trade

Household spending is expected to be a mainspring of the The recession has forced workers in many industries to moderate their pay demands while suppliers have come under pressure to hold

down prices. Canada's annualised inflation rate

has dropped below 2 per cent

Quebec is the first of Canada's 10 provinces to grasp the nettle of aligning its provincial sales tax with the new (but highly unpopular) federal Goods and Services Tax. Although the harmonisation as short-term political risks, it greatly simplifies tax-paying companies' paperwork.

The macroeconomic picture has improved markedly in recent months. Canadian banks' prime lending rates are below 8 per cent compared to a

recovery, as consumers go shopping with the savings from lower mortgage payments. National Bank forecasts a 3.5 per cent rise in retail sales this year, accelerating to 5.5 per cent in 1993. Tourism should get belp this year from Montreal's birthday celebra

The Canadian dollar, whose

level is closely watched by

such export-dependent indus-

tries as forestry and mining, has tumbled by almost 10 per

With the US buying almost

three-quarters of Quebec's

exports, the upturn south of the border will give an added

National Bank of Canada,

whose head office is in Mon-

treal, forecasts that Quebec's

growth rate will accelerate

from 1.5 per cent in real terms

this year to 3.5 per cent in 1993.

cent since last November.

lift to business.

Like their counterparts in the rest of Canada, many Quebec business leaders are painfully aware that more favourable interest and exchange rates

may not be sufficient to guarantee another burst of prosper-

The postponement of the C\$12bn Great Whale hydroelectric project means the construction and engineering sector will recover more slowly than hoped.

Fixed investment as a whole is likely to stagnate for some time as work on new aluminium smelters is completed, and the government winds down construction of sewage treatment stations. In the longer term, the drive towards freer trade has exposed inefficiencies in such cornerstones of the Quebec economy as forestry, dairy farming and the textile industry.

Canadian pulp and paper exporters have steadily lost market share in the US to lower-cost producers elsewhere. Likewise, unemployment in the textile and clothing sector, which is centred in Quebec, has soared as uncompetitive companies are forced to slim down or close down.

Quebec's inefficient but politically powerful dairy farmers are threatened by growing pressure (mostly from Canada's international trading partners, but also from domestic food processors and consumers) on a raft of protective quotas and other non-tariff barri-

Although the cost in unemployment has been painfully ligh, the recession has forced workers in many industries to moderate their pay demands, while suppliers have come under pressure to hold down prices. Canada's annualised inflation rate has dropped below 2 per cent In addition, Quebec's trade

unions have generally been more willing than their counternarts in other parts of the country to reopen labour contracts and accept management demands for more flexible work practices. The ability to build on recent productivity improvements is likely to distinguish the next generation of Quebec business winners from its has-beens.

Pharmaceuticals thrive in Montreal, writes Robert Gibbens

## Cornerstone of economic development in the 1990s

THE WESTERN suburbs of Montreal illustrate the turnround in the Quebec pharmaceuticals industry - from decline in the early 1980s to a cornerstone of economic development in the 1990s.

Hoffman-La Roche, Canadian arm of the Swiss multinational, built extensive new research and manufacturing space in pastoral Vaudreuil The multi-storey tower and five-storey building alongside were designed for the 21st century. But in 1969, the federal government introduced compulsory licensing for imported products and reduced basic patent protection for brandname medicines to four years.

The company never moved into its space-age facilities. Nor did an American-based concern which had built a new research lab in the same area. Hoffman-La Roche moved its Canadian head office to Ontario and its Canadian research facilities to the US. It waited several years to sell its Vaudreuil ven-

The brand-name companies maintained that patent protection had been reduced to the clear advantage of generic producers in the name of lower drug prices. They warned that the compulsory licensing system would not work for Canada or Quebec. The exodus continued. By the early 1980s, Ayerst, McKenna & Harrison closed its Montreal laboratory, merging it into the parent's US research operations. A few enterprising researchers stayed put, however. With Canadian financial backing, one group founded a new company specialising in products for treating diseases of the immune system and cancer and viral

Six-year-old BloChem Pharma has yet to show an operating profit but it boasts a market valuation of C\$1bn. It is Glaxo's Canadian partner in developing anti-Aids drugs. A big change came in 1987 when Ottawa bowed to pressure from the multinationals and agreed to extend patent protection to seven years, in return for

Michael Carnow, president of Merck Frosst Canada: expansion

promises of sizeable investment in Canada. The same western suburbs of

Montreal now display the results of the investment spree that followed. Nearly \$500m has been invested by brandname international and domestic companies in new research. laboratories and production plants in Quebec since then. Montreal has become the undisputed centre of Canada's pharmaceutical industry. Merck Frosst Canada, Burroughs Wellcome, Bristol-

are among those which led the way. Now the Federal Government plans to extend patent protection further in line with international practice and end compulsory licensing. "We want the government to adopt legislation placing Canada on a level playing field with the major industrial nations for protection of phar-

Myers Squibb Pharmaceutical

Group and BioChem Pharma

maceuticai products," says Mr Michael Carnow, president of Merck Frosst Canada. "This will enable Canada and Quebec to compete for investment."

He said Gatt deadlines for

agreement on patent protection

have slipped and Canada should move unilaterally to ensure Canadian-based companies can compete. "This will lead to more research and capital investment." Merck Frosst has begun engineering work on a big manufacturing expansion

in Montreal. The new plant will be geared to specific products for international markets. The company's Canadian research budget is C\$270m for 1991-95, including a new \$70m research centre opened last September. Colin Mallet, president of Sandoz Canada, says the investment spree should continue. He predicts that hundreds of new research and production jobs will be created in Quebec and Canada this decade if conditions are favour-

The Quebec government is likely to work hard to ensure that the bulk of the new investment comes to the province. Pharmaceuticals represent one of Quebec's three most important competitive industrial clusters, employing more than 2.000 researchers and planning investment of up to \$1.5b this

Almost half the total Cana-

and more than half its annual \$300m research effort are now located in Quebec.

The province has four university faculties of medicine. two pharmacology faculties, an array of specialised bodies such as the Montreal Clinical Research, Biotechnology Research and the Heart and Cancer Institutes. Research is also carried out at Laval Uni-

versity in Quebec City. The Quebec industry's activities range from basic, applied and clinical research to biotech engineering. Production includes fine chemicals, pharmaceutic and therapeutic products, vaccines, biological and diagnostic products. In 1990, the Quebec industry invested \$126m in research, up 28 per cent from 1989, and the 1991 total was higher. It also includes some generic producers, though these have congregated mainly in Ontario.

The federal government is now considering extending the patent protection period to 20 years after application or equivalent to about 10 years in the market place. "With the population ageing, the industry will play a more crucial role in the economy," says Mr Mallet. "We're all moving towards ionger protection, partly because testing lasts longer and is more complex. We must provide an environment fostering competition with other industrial countries in scientific expertise and patent protection.

"The dice are still loaded against Canada now because its local market is lost to generic manufacturers after only seven years. Canadian firms and researchers must be given a fighting chance."

Generic producers have reacted strongly to suggestions that patent protection will be extended significantly. Mr Barry Sherman, president of Apotex, Toronto, one of Canada's two biggest generic drug makers, said the government has capitulated to US pressure. Anotex is not going ahead with lans for a \$50m extension to its Winnipeg plant.

Power Corporation of Canada is an investment and management company with principal interests in the financial services and communications sectors in Canada, the United States and Europe. Consolidated assets are in excess of C \$24.8 billion. Associated companies of Power Corporation include:

Power Financial Corporation, Great-West Lifeco Inc., The Great-West Life Assurance Company, Pargesa Holding S.A., Investors Group Inc., HD International Limited, Gesca Ltée, Power Broadcasting Inc., Power Consolidated (China) Pulp Inc.

# QUEBEC

When it comes to energy and resources, few places on earth have what Québec has to offer.

Québec is blessed with a vast untapped mineral potential and is developing North America's leading computerized geo-mining information system to make new discoveries easier than ever. Huge reserves of renewable, low-cost and environmentally safe hydro-electric power can mean important competitive advantages in any field of electro-technology. And Québec's highly skilled work force has more than enough energy to handle anything that comes along and then some.

All good reasons to consider Québec. Because success in today's world takes energy and resources.

whether the NYPA was swayed by the environmental protes or simply by the recession's impact on its customers' appe-

power utility.

Recession has slowed growth

But fisse is no doubt that ally cold winter, a new export the decision has set back Hydro-Quebec's plans to stitch the small matter of an extra together one of the world's big-

gest hydro-electric grids in northern Griebec. Mr Richard Drouin, the utility's amiable chairman, acknowledges the problems of the past, as well as the chalenges widch remain.

As the construction programme slows, price increases could drop to, or even below, the overall inflation rate

He is confident some of the pressures will ease over the next few years. Hydro-Quebec news in the first quarter, with an 8.1 per cent rise in electricleap-year day in February.

In the longer term, Mr Drouin predicts that the competition hydro-electric power has faced from cheap, clean natural gas will wane when consumers discover that gas prices can go up as sharply as they go down.

He adds that as the utility's construction programme slows down in the mid-1990s, price increases could drop to, or even below, the overall inflation rate. Finally, Mr Drouin has no hesitation in predicting that the New York Power Authority

hydro-electric power from Quebec before long. "We're not trying to get the whole New York market," he

will be back in the market for

Hydro-Quebec chief Richard Brown: challenges remain

"We're only trying to get Hydro-Quebec has always insisted that none of its new projects are driven entirely by

Whale will no longer be needed to supply power to New York in 1998 as originally planned, the utility still plans to press ahead with the C\$12bn project once a thorough environmental assessment by the federal and provincial governments is

It expects construction to start towards the end of next year, with the first generating station being commissioned around the turn of the century. The second and third phases will probably be postponed. They are tentatively scheduled for completion in 2007 and 2008, five years later than

Lengthy environmental reviews may delay two other northern Quebec projects, known as Eastmain-1 and

Laforge-2.
Although Great Whale is on

Quebec still has its hands full with projects on the La Grande River, about 150 miles to the

Four generating stations, with a capacity of almost MW4,700, are scheduled for completion by 1995, largely to meet demand from new aluminium smelters along the St Lawrence River.

In an effort to spread its risks, Hydro-Quebec has begun encouraging co-generation pro-jects, mostly in partnership with local pulp and paper

It aims to buy up to MW750 of power from co-generation plants by 1996, and is sifting through a pile of applications from potential suppliers.

The busy construction programme requires heavy borrowing on both domestic and international capital markets.

dent for finance, estimates the utility's borrowing needs, including refinancings, at C\$4.5bn this year, C\$3bn in 1993 and C\$4.5bn in 1994.

The utility is leaving few stones unturned in its efforts to tap outside sources of finance. In April, it became the first buyer outside the aircraft industry to finance new equip-

The row over the NYPA contract has taught Hydro-Quebec some lessons it won't easily forget

ment, in this case four gas turbines, through a US Ownership Foreign Sales Corporation. These deals are a complex form of lease, driven mainly by tax advantages for investors.

Hydro-Quebec completed its first global bond issue last year. It made its debut in the Euro-French franc market last March, and has become increasingly active in the US

medium-term note market. It expects to expand its commercial paper programme to about C\$500m by the end of

Mr Drouin says that contrary to some press reports, the cancellation of the New York contract will not affect Hydro-Quebec's ability to service its US dollar debt.

The new aluminium smelters, which will be Hydro-Quebec's biggest new customers in 1992 and 1993, will pay for their electricity in US dollars. "We don't feel threatened at all. currency-wise," Mr Labonte

Nonetheless, the row over the NYPA contract bas taught Hydro-Quebec some lessons it won't easily forget. "It made us more aware that in the 1990s there were people around us who could affect our operations, and that we should be more aggressive than passive," says Mr Drouin.

## A strong sense of survival

MONTREAL feels a dash of not lost their sense of humour. from Europe and is North nostalgia for the Expo 67 World Fair. It casts a glance of envy in Montreal, and the city at Seville's Expo 92 as Montreal celebrates its 350th birthday party this year.

Expo 67 marked the pinnacle of Montreal's achievements. Francophones, Anglophones and more recent immigrants worked together to build an international exhibition on a clump of small islands in the St Lawrence river.

The federal government and the other provinces chipped in generously, with only one or two scrooges. It was a rare national effort. After that it seemed Montreal, with its mul-'ilingual services, large inland s aport and two commercial all ports, proximity to New York and Boston, Toronto and Chicago, might host several international organisations, including part of Unesco. But little happened.

Over the next 25 years, Montreal and its 3m inhabitants struggled through recessions. two world energy crises, the increase of separatism, an exodus of 190,000 Anglophones and divisive constitutional deliste. The current recession end there is no free ing for the 350th birthday

Satire continues to prosper stages an annual Festival of Laughs besides international

film and jazz festivals. Montreal, still feeling snubbed by the hauteur of Quebec City, the provincial capital, realises it urgently needs an international vocation, if only to express its growing ethnic mix - 70 per cent Francophones with the

America's most European big city. Its hotels and restaurants are among the continent's best. and winter and summer sports are just an hour away.

Founding Montreal on a 35mile-long island in the St Lawrence system was called la folle entreprise. A French tax collector believed God wanted him to build a hospital inside a mission. Some rich French families put up money, the story

Several industrial sectors have faced severe competitive pressures in recent years, and will need a shake-up if they are to fulfil the hopes being placed in them

rest Anglophones and immigrants. In spite of the financial burden of \$15n-worth of debt from the 1976 Olympics, the city has expanded its cultural heritage, restored the waterfront and the Old City and extended its museums and

It has come to terms with the age of skyscrapers and insists on variety and renewal, while adjusting to the post-industrial

Montreal's population fell behind that of Toronto in the late 1950s and may yet be overtaken by fast growing Vancouver. But it is still a gateway

goes, and soldier Paul de Chomedey, Sieur de Maisonneuve, landed at Quebec in 1641 with a clutch of settlers. They set out for Montreal Island the next spring, and De Maisonneuve swore he would found a colony "were every tree on the

#### **INVESTMENT OPPORTUNITIES** IN QUÉBEC'S TOURISM INDUSTRY

Québec is situated next door to the world's richest tourist markets and offers exceptional attractions, the development of which could prove to be very profitable for investors seeking promising business opportunities.

At the present time, existing business opportunities in Québec's tourism industry can be summarized as follows:

 Ski areas in need of additional non-ski sports facilities; Well-located sites with exceptional resort development potential; Resort projects in need of investor-operators; Resort project developers seeking investor-partners.

The Department of Tourism is seeking expressions of interest from potential investors. Interested parties are invited to contact us.

OUIMET - CORDON BLEU INC.

L. Yves Fortier

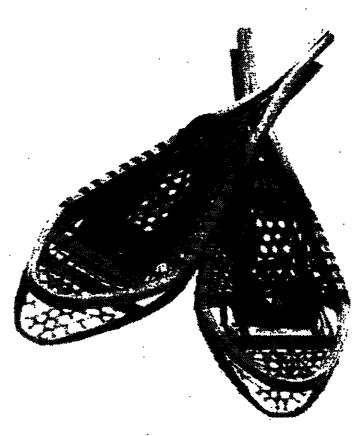

-Robert Onimet, L.S.C.; M.P.S.; M.B.A.; Chairman of the Board and Chief Executive Officer of Outmet -Cordon Blen Inc. is pleased to announce the election of Me L. Yves Fortier, C.C. Q.C.; B.A.; B.C.L.; B. LITT. (OXON); L.L.D. (HON.), as a member of the Board of Directors of the company.

Mr. Fortier is Chairman of the Board of Ogilvy Renault, - one of the largest law firms in Canada. He was, until recently, the Ambassador of Canada to the United Nations in New York.

The other board members reelected at the annual shareholders' meeting are: Mrs. Myriam Onimet; Messrs. Jean Campean; Réal Contombe; Pierre Desmarais II; Eric D. Haueter, from Zurich, Switzerland; Aimé Légaré; James D. Raymond; Stephen A. Wilgar of Toronto; and Aaron Yohalem of New York.

The companies, which are part of Quimet - Cordon Bleu Inc. have as their main activities the financial management of different portfolios, the acquisition and equity participation in different companies, and the food processing and marketing of nany food products under the brands of Cordon Bleu, Clark,

Paris Pâté, and many others.

## These are not the only things you can trade in Québec.

Yes, Quebec is rich in history and cultural artifacts. But it is also home to Canada's oldest and most innovative stock exchange.

#### The Montreal Exchange.

One stop shopping for stocks, options and futures, where you can trade the issues of all major public Canadian corporations and where you will find Canada's only marketplace for financial futures.

The gateway to an entire continent, The Montreal Exchange is North America's only exchange offering automated access to both the Canadian equity market and, via an electronic trading link, to the U.S. National Market System. Our risk management products provide flexible, low cost access to the short end of the money market as well as to the Government of Canada bond market - the world's sixth largest.

Next time you need a North American trading post, think Montreal! For more information, call (514) 871-2424 or fax (514) 871-3553.

The Montreal Exchange, 800 Victoria Square, P.O. Box 61, Montreal (Quebec), Canada H4Z 1A9

#### FINANCIAL SERVICES

## Recession, failures curb enthusiasm

QUEBEC led the push for debate on tightening some of may create a false sense of Canadian financial services deregulation in the early 1980s, but the enthusiasm has since been tempered by recession and some spectacular corporate failures.

The province was tilting at the four pillars of Canadian financial services - banks, trusts, insurance and investment dealing - even before the national debate on deregulation began in 1985.

Mr Jacques Parizeau, then the province's finance minister, argued for broad deregulation and more competition, and accused Ottawa of dragging its feet. The powerful Desjardins credit union group, with \$45bn in assets, backed him, eager to keep its grip on Quebec's retail banking and to nex its muscles in corporate lending and other services.

The Quebec financial services industry generally feels that the new federal legislation falls short

Most Quebec institutions, such as National Bank of Canada and the life insurance firms, welcomed the idea of new powers and more competition, stressing an entrepreneurial approach to financial services. Some began buying sprees. But others such as Industrial-Alliance, the province's biggest locally-owned insurance group, were more

Now, Quebec - struggling with recession – finds itself having to adjust not only to its own deregulation moves, but also changes in the rules for federally-regulated banks, insurers and trust companies which are expected to take effect this month.

One insurance executive in Montreal says Quebec's liberal regulatory regime may have contributed to the recent failure of Cooperants Mutual Life, a Quebec-based company. The Cooperants failure has prompted a behind-the-scenes

the province's insurance regu-

The Quebec financial services industry generally feels, however, that the new federal legislation falls short and that a "rendezvous with history" may have been missed, says Mr Claude Forget, senior vice-president of The Laurentian Group, a full-service insti-

On one hand, Quebec is pleased that the federal reforms level the playing field among institutions. For exam-ple, they will allow banks for the first time to buy trust and insurance companies, and insurers to buy trusts.

But there are strict conditions on the banks' ability to offer insurance and fiduciary products. Banks and trusts cannot lease cars and distribnte insurance through their branches - less than Quebec wanted. Banks have been allowed to buy investment dealers since 1987.

The formation of a national securities commission, a key issue for Quebec, has been delayed indefinitely. Securities trading is a provincial jurisdiction. The new "deregu-lated" national industry faces a highly complex federal

supervisory system.

The Bank Act has gone from 255 pages to 342 containing 604 sections against 316; the Insurance Act from 173 pages to 406 with 762 sections against 238. Detailed regulations are yet to come.

The legislation does break down barriers," says Mr Forget. But the failures of two western banks, several Ontario trust companies and Cooperants Life in Quebec made legislators cautious.

"It strengthens controls of all kinds in trying to achieve financial-sector security," Mr Forget says. Regulatory compliance will require elaborate corporate procedures to track authorisations and restrictions, threatening lengthy delays. Institutions may not compete effectively from their domestic bases and controls

security, he says.

While deregulation has been the dominant theme for seven years, Quebec-based banks, trusts, insurance firms and the diversified Desjardins group have faced heavy domestic mortgage repossessions and write-offs on sour corporate

The worst appears to be past for loans within Canada, with the notable exception of Montreal-based National Bank of Canada's exposure to property developer Olympia & York.

Deregulation and tough economic conditions are leading to greater financial services concentration in Quebec. Several independent Quebec securities firms have disappeared in recent years. The largest brokerage firm in the province, Levesque Beaubien Geof-

The Montreal stock exchange, with almost 100 per cent electronic trading, was profitable last vear

frion, is now a National Bank subsidiary. Meanwhile, some assets of the failed Cooperants insurance group have been acquired by Desiardins and Industrial-Alliance.

Paying off policyholders may cost the insurance industry well over \$100m via its consumer protection fund.

Quebec property and casualty firms have been under severe margin pressure for two years, bringing more concentration and new international ties. The Montreal stock exchange, with almost 100 per cent electronic trading, was profitable last year and has kept its share of the value of equity trading in Canada at about 20 per cent. It has scored some successes in developing its niche derivative products, notably Government of Canada bond futures.

PROFILE: Caisse de dépôt et placement du Quebec

## Institution wields a big stick

THE CAISSE de dépôt et placement du Quebec has long prided itself on speaking softly but carrying a big stick. However, as the resources at its disposal grow, the institution which manages Quebec's government pension and insurance funds is starting to turn up the volume, and wield its stick a little more forcefully.

The caisse's widening influence is visible both in Quebec and far beyond the province's borders. At home, it has taken a leading role over the past year in refinancing and reorganising Domtar, the Montrealbased pulp and paper producer in which it and another Quebec government agency have a

Well aware that it contrib utes more than a tenth of all transactions on the Montreal stock exchange, the caisse is nudging up its slice of the business to securities firms which track Quebec-based companies.

However, its most ambitious thrust is on the international front. More than 16 per cent of the caisse's assets, totalling C\$41bn, is invested in foreign bonds and equities. This proportion is likely to grow in coming years.

Mr Jean-Claude Delorme, the caisse's chairman, says that

The caisse has a seat on Cobepa's board which may help open up opportunities in Europe

the caisse wants to build on the contacts it has gained around the world.

"If we were to stop there, I don't think we'd be getting the full benefit of our connections," Mr Delorme says. "We should use the leverage that the caisse can muster to bring foreign industrial groups to consider Quebec as an area to

The leverage is being wielded in a number of ways. First, the caisse is moving beyond passive portfolio
